

## FAQ: Bowl Water Level Adjustment

In general, our toilets have a low water spot. If you wish to increase the water level inside of your bowl, there are small adjustments you can make.

Next to your flush valve inside of the toilet tank, there is a small cylinder. On the top of this tube is a small dial.

You can set the dial to "8" and this will slightly increase the water level in your bowl.

Please note that it may take time for the changes to appear.
