

## FAQ: Push-Button Installation

Regarding the flushing itself, the two buttons on the button assembly indicate the “small” and “full” flushes. The smaller side indicates the small flush and the larger side indicates the full flush.

You will have to orient these properly to the valve inside of your toilet tank.

On the valve inside of your tank, there are two buttons. The corner of the buttons will have either a small circle cut out or a half circle cut out. The full circle indicates the full flush and the half circle indicates a small flush.
