March 27, 2017

From time to time the government makes changes to category classifications for various ingredients used in industry. Recently, one of these changes necessitated our changing the solvent used in our famous FIVE POINT THREE formula. The primary difference is the new solvent weighs less than the old, so although the amount of the formula in our unit's will remain the same, their net weight will now be lighter. ***The volume, potency, effectiveness, reliability and non-flammability of this unmatched formula remains the same.***

On the attached list there are new stock numbers corresponding to the old stock numbers and to the new weights of the FIVE POINT THREE units. When ordering, please make sure you select the correct stock number/s. SDS sheets will be available reflecting this change.

Your orders MUST reference the "new stock numbers" effective June 1, 2017. These are the stock numbers found at the right side of the list. If we do not receive the new number on your PO's it may delay your order, or result in the wrong product being shipped. Please use the "conversion chart" for reference when creating your purchase orders.

We have not had any changes to our FIVE POINT THREE formula in 19 years, so we understand old habits may be tough to break. Additionally, to add to the fun, we have a new team processing the orders, so they will not be used to the old stock numbers. Although we do not anticipate any problems, we are all human, so we know errors may happen. We promise to be understanding if you make an error, and trust you will respond in kind should the factory do so.

Thank you for your patient understanding, highly valued business, continued support and, probably the most important element, your trust, which we try to reaffirm with every order, and every time our products are used. We are excited about the future, and hope—in spite of the changes it brings—you are as well.

Sincerely,
Edward Ferguson
