**2022 PRODUCT LINE**

# Welcome to the 2022 Sonostar Product Line Catalog!

The math that enables us to make domes out of triangles was invented about 2300 years ago by the Greeks. The word 'geodesic' is a combination of two words; 'geo', referring to the earth, and 'deseo', which is the root word for 'to measure', so together they mean 'to measure the earth'. Around 250 BC, Eratosthenes was able to calculate the circumference of the earth using the Greek math disciplines. Geodesic domes are a direct outcome of this practical application of mathematics.

Sonostar first started online sales of our standard hubs in 2009. The first hubs were made to fit only 1/2" schedule 40 PVC, and they had no holes in the hub arms to attach them to the struts. Two years later, we added the bolt holes, giving everyone the option to bolt the domes together or glue them. As the PVC domes became more popular, requests for larger hubs grew. In about 2015, we launched the megahubs, which could accommodate 1" PVC on the inside of the hub arms and 1 1/2" PVC on the outside of the hub arms. These soon became more popular than the standard hubs. About this time, Sonostar started kitting complete dome kits for 2V, 3V, 4V, 5V and 6V configurations. There were many permutations of these kits, based on the domes' diameters and the size of the PVC pipe. Sonostar started ordering all its PVC from a custom extruder who supplied furniture grade pipe with a UV inhibitor added to keep it from discoloring in the sunlight. We also started producing hubs (and struts) in both black and white to fit many different applications.

Then Covid hit. In the summer of 2019, we started selling a lot of our greenhouse 'Bubble Domes' that came complete with an all-clear cover. The demand became a flood. Customers were using them for outdoor dining, because indoor dining had been banned. Fortunately, since all our hubs and struts are made in the USA, we were able to ramp up production to meet the demand, even with sales doubling every month for 5 straight months. The increased sales led to more R&D, which led to mass-produced 5 meter (16.4' diameter) and 6 meter (19.7' diameter) full kit domes.

We don't know if Eratosthenes ever made a geodesic dome, even though his math showed us the way. We hope his inspiration can trigger your imagination to combine the best of both ancient and modern ideas. Have a great time building!

# STANDARD 1/2" BUBBLE DOME KITS

Sonostar's Standard Bubble Dome stands 7' high in the center and has an 11.75' diameter at the base. The big difference between Sonostar Domes and other marketplace domes are the rugged hub connectors and the flexible frame made of 1/2" furniture grade schedule 40 PVC. The kit takes about 1 1/2 hours to assemble.

# MEGA 1" BUBBLE DOME KITS

There are substantial differences between the Sonostar Standard Bubble Dome and the Mega Bubble Dome. The Mega Bubble Dome uses Megahubs, larger and stronger than standard hubs, and requires thicker and stronger PVC for the struts. The advantage of the Mega Bubble Dome is that it can support a lot more weight from the frame than the standard dome.

This 2V Basic Hub Kit for use with 1/2" Schedule 40 PVC tubing is the simplest of all the domes in structure, with the fewest number of pieces. Use our Geodesic Dome Calculator located on our website to determine the required strut length for the size dome shelter you are looking to build. We also offer Hub + Strut Kit options that include pre cut and color coded PVC struts, making it easy to build a Geodesic Dome.

If you don't see the size you are looking for email us ([support@sonostarhub.com](mailto:support@sonostarhub.com)) to submit a custom kit inquiry.

This 2V geodesic dome kit uses Sonostar Mega Hubs, suitable for either 1" or 1 1/2" Schedule 40 PVC tubing. The hubs are dual purpose, but your bolt size will change with your pipe diameter. The outside diameter of Mega Hub dome connector is sized to accommodate the inside diameter of 1 1/2" PVC pipe.

Our 3V 5/9 Basic Hub Kit is perfect for those looking to customize their geodesic dome. The hub only kit includes only the dome connector hubs, the nuts and bolts required, and a rubber mallet. This leaves the cutting of PVC struts up to you allowing you to build your PVC Dome as small or as big as geometry allows.

If you are looking to take the guesswork out of building a geodesic dome, we can pre-cut and color code the struts for you. Just chose the Hub + Strut Kit.

# 5 Meter Multi-Use Dome - Mega Hub + 1 Inch PVC Strut + Cover Kits

The Sonostar 5 Meter (16.4') diameter Multi-use dome is a 3V 5/9 configuration dome that uses 1" PVC and Megahubs to make a strong and sturdy frame. The dome features almost 200 sq ft of floor space, and an internal height of almost 10'. This dome can easily accommodate 12 people for dining at multiple tables. There are choices of color for both the hubs and the struts (black or white), and for the cover (all clear or 1/3 clear and 2/3 white). The covers all have a circular door and multiple covered windows and vents around the top.

# 6 Meter Multi-Use Dome - Mega Hub + 1.5 Inch PVC Strut + Cover Kits

The Sonostar 6 Meter (19.7') diameter Multi-use dome is a 3V 5/9 configuration dome that uses 1.5" PVC and Megahubs to make a super strong and sturdy frame. The dome features 285 sq ft of floor space, and an internal height of 11.7'. This dome can easily accommodate 16 people for dining at multiple tables. There are choices of color for both the hubs and the struts (black or white), and for the cover (all clear or 1/3 clear and 2/3 white). The covers all have a circular door and multiple covered windows and vents around the top.

This is a Simple 4V Geodesic Dome Kit designed for use with 1/2" Schedule 40 PVC pipe. The 4V dome is exactly half of a sphere. As the frequency goes up (2V, 3V, 4V, etc.), the 'roundness' of the dome increases, as does its overall strength. We offer hub only kits (no PVC) or Hub + Strut Kits that include all the pre-cut color coded PVC struts.

The 4V dome is exactly half of a sphere. As the frequency goes up (2V, 3V, 4V, etc.), the 'roundness' of the dome increases, as does its overall strength. There are six different sized struts in Frequency 4 domes, and you can find those lengths using our Geodesic Dome Calculator on our website.

We offer both Basic Hub Kits and Hub + Strut Kits. If you don't see the size you are looking for email us ([support@sonostarhub.com](mailto:support@sonostarhub.com)) to submit a custom kit inquiry.

Our 5V Geodesic Dome Kit is perfect for a wide variety of purposes. The '3/8' refers to the proportion of a full sphere, so the finished dome will be 1/8 smaller in dimension than a hemisphere. Our Standard Dome kit includes all the Hardcore 4-Star, 5-Star, and 6-Star dome hub connectors you'll need to build your 5V 3/8 Geodesic Dome. We offer both the Dome Hub only kit, and the full kit that also includes pre-cut PVC struts.

If you don't see the size you are looking for email us ([support@sonostarhub.com](mailto:support@sonostarhub.com)) to submit a custom kit inquiry.
