Mantis 23
Inlet/ Outlet Conveyor

FEATURES

- Can be fitted to either side of the Mantis 23

- Automatic rail width adjustment

- PCB sizes:
  - Max X: 500mm
  - Min Y: 50mm
  - Max Y: 450mm

- Machine controlled

- Heavy board handling as standard

- Outlet conveyor can be used

Introducing the Inlet/ Outlet Conveyors for the Mantis 23

The versatile **Mantis 23** printer from Reprint is a compact, precise, exceptionally easy to use fully automatic inline screen printer designed for use in high mix, mid-to-high production environments where fast changeovers and flexibility are paramount.

Reprint designed optional inlet and outlet conveyors can be fitted to the machine, which allows for minimal effect on your production line's overall footprint.

The conveyors themselves are controlled by the Mantis 23 software, giving more intelligent control over the conveyors than that of conventional conveyors.
This also eliminates the need for FMI between the conveyors and the printer itself, meaning the Mantis 23's FMI can bypass the conveyors and connect directly to equipment up-line and down-line of the machine.

The conveyors have automatic width adjustment, the details of which are stored within the product files used by the Mantis 23 software allowing for fast setup / product change over.

This option makes the Mantis 23 a very flexible printing solution, allowing it to be used inline or as a fully featured stand-alone unit in its own right.
