Low-Floor City Bus Manual Ramp

This robust and lightweight ramp was designed to combat the need for a stronger and lighter ramp from Bus Body Builders and Operators.

Our manual ramps draw on the strengths of past DSG group ramps whilst addressing weaknesses and developing to meet changing laws and regulations. Previous bungee handle ramps were manufactured with metal cassette and moving top board. Our ramps use a steel cassette and composite top board to offer increased reliability and reduced weight.

The composite material of the top board is designed specifically to avoid splintering. The ramp incorporates the same reinforced bungee style handle that has seen PSV ramps become a popular choice with Operators in the Aftermarket. The ramp is available in a number of sizes including a narrow version suitable for vehicles with a smaller front door aperture.

PSV Transport Systems Ltd,
21 Impresa Park, Pindar Road,
Hoddesdon, EN11 0DL

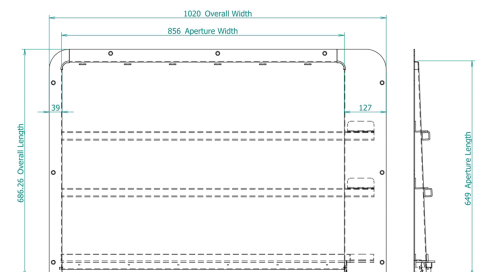

Key Features

- > Conforms to current UK and EU regulations
- > Cassette style design
- > Integral Floor
- > Easy Retro-fit
- > Safe Working Load 300Kg
- > Fully Retractable Bungee style handle
- > Light-weight construction
- > Concealed maintenance free pivots
- > Posture friendly deployment
- > Manufactured in a range of sizes to suit step height

Safety Features

- > Safety Interlock
- > High Visibility Edges
- > Anti-slip surface

PSV Manual Ramp Narrow

PSV Manual Ramp Wide
