

Content:

1 small Transducer with 1/4" (6.3mm) output socket and mounting adhesive

- 1. Locate the best position on the instrument for optimum sound quality and output.
- 2. Apply an even amount of included adhesive to the bottom of the pickup.
- 3. Press pickup firmly onto the instrument.
- 4. Make appropriate electrical connections.

Note:

Piezo pickups and transducers have a very high output impedance. In order to get the optimum sound output we recommend an amplifier with low impedance input.
