# FX-PCV Programmable VAV Box Controllers Catalog Page

**Code No. LIT-1900766**
**Issued April 2018**

FX-PCVs are programmable digital controllers tailored for VAV applications that can be switched between MS/TP and N2 Communications protocols. When they are used as MS/TP devices, they communicate through the BACnet MS/TP protocol. In N2 mode, they can be used as replacements for legacy Johnson Controls® controllers.

**Note:** When replacing a VMA1400 Series controller on an existing N2 network, the FX-PCV18 Series controller is the preferred device because certain existing sensor models can be reused. FX-PCV18 controllers are intended for use as functional replacements for the VMA1410, VMA1415, VMA1420, and VMA1440 controllers only. FX-PCV18 controllers support field-selectable BACnet MS/TP or N2 protocols.

The FX-PCV1930 programmable controller uses BACnet/IP networking for higher speed communication with the FX-PCT and improved bandwidth. This gives you more flexibility in choosing controllers for your site's specific needs.

The FX-PCV1615, FX-PCV1617, FX-PCV1832, and FX-PCV1930 controllers feature an integral digital differential pressure transducer (DPT), an integral damper actuator, and a 32-bit microprocessor. The controllers' small package size facilitates quick field installation and efficient use of space, while not compromising high-tech control performance. These controllers easily adapt NS Series Network Sensors for zone and discharge air temperature sensing.

The FX-PCV1626 Controller is shipped with an actuator but without a differential pressure transducer (DPT), making the controller well suited for commercial zoning applications or for pressure-dependent VAV box applications where no DPT is required.

The FX-PCV1656 controller is shipped without a differential pressure transducer but with an integrated actuator and ball valve linkage. This controller is for use on the Johnson Controls VG-1000 1/2 to 1 inch valves and needs to be used primarily as a replacement for the FX-PCV assembly of the VG-1000 Series Smart Valve product. The smart valve product line is ideal for chilled beam applications.

The FX-PCV1628 includes a DPT but does not have an actuator. Without an actuator, this controller is well suited for controlling large VAV boxes that require more than 4 N•m of torque.

These features make the FX-PCV16 controllers the product of choice for VAV systems. The wide variety of network sensor models provides options for measuring and displaying zone temperature, occupancy detection, duct temperature, zone humidity and dewpoint determination, carbon dioxide ($CO_2$) level, setpoint adjustments, VAV box fan speed control, and discharge air temperatures.

The FX-PCV18 models are designed to be functional replacements for the VMA14xx Series Variable Air Volume Modular Assembly Controllers. They contain a sensor bus port and accessories well suited for replacing VMA14xx Controllers.

Refer to the *FX-PC Series Programmable Controllers and Related Products Product Bulletin (LIT-12011657)* for product application details and single point of contact information.

If the product fails to operate within its specifications, replace the product. For a replacement product, contact the nearest Johnson Controls® representative.

## Features

- **Standard BACnet® Protocol**—Provides interoperability with Johnson Controls® and third-party Building Automation System (BAS) products that use the widely accepted BACnet standard.

- **Standard Hardware and Software Platform**—Uses a common hardware design throughout the family line to support standardized wiring practices and installation workflows. Also uses a common software design to support use of a single tool for control applications, commissioning, and troubleshooting to minimize technical training.

- **FX-ZFR Wireless Field Controller (FC) or Sensor/Actuator (SA) Bus Interface**-Both the FX-ZFR1800 Series Wireless and WNC1800/FX-ZFR182x Pro Series Wireless Field Bus (FX-ZFR Pro) provide a wireless alternative to hard-wired system counterparts, offering application flexibility and mobility with minimal disruption to building occupants.

- **Wireless Field Controller (FC)/Sensor/Actuator (SA) Bus Interface** (where available) - Provides a wireless alternative to hard-wired field bus networking and sensor connections, providing application flexibility, mobility, and minimal disruption to building occupants.

- **Bluetooth® Wireless Commissioning Interface**—Provides an easy-to-use connection to the configuration and commissioning tool.

- **Auto-Tuned Control Loops**—Reduce commissioning time, eliminate change-of-season re-commissioning, and reduce wear and tear on mechanical devices.

- **Universal Inputs and Configurable Outputs**—Allow multiple signal options per channel to provide input/output flexibility.

- **Optional Local User Interface Display**—Allows convenient monitoring and adjusting capabilities at the local device.

- **BACnet Testing Laboratories™ (BTL) Listing**—Ensures interoperability with other BTL-listed devices. BTL is a third-party agency which validates that BAS vendor products meet the BACnet industry-standard protocol.

- **32-bit microprocessor** ensure optimum performance and meets industry specification.

- **BACnet Automatic Discovery** support enables easy controller integration.

- **MS/TP Field Controllers** have an integral end-of-line (EOL) switch that enables field controllers to be terminating devices on the communications bus

Johnson Controls

- Pluggable communications bus and supply power terminal blocks expedite installation and troubleshooting.
- Writable flash memory allows standard or customized applications to be downloaded from the FX-PCT and enables persistent application data.
- Models that include a DPT feature a state-of-the-art digital non-flow DPT to provide 14-bit resolution with bidirectional flow operation that supports automatic correction for polarity on high- and low-pressure DP tube connections; this pressure sensor eliminates high- and low-pressure connection mistakes.
- A phone jack-style connector on the FC Bus and SA Bus of the FX-PCV16 that supports quick connection to the Wireless Commissioning Converter, FX-ZFR or FX-ZFR Pro Series Wireless Field Bus System wireless routers, MAP Gateway, and network sensors.
- Models that include actuators feature a fast response actuator that drives the damper from full open to full closed (90°) in 60 seconds to reduce commissioning time.
