

TRIUMPH HERALD & VITESSE
FRONT SEAT DIAPHRAGM
ST900

As you will see, your new diaphragm has 10 hooks instead of the 8 originals. Remove the two front & two rear short hooks & replace them with the four longer hooks supplied. In order to fit your new unit you will need to remove your seat base cover, foam cushion & old diaphragm. Hook the two front & rear hooks in the existing holes then drill 6 new holes in the frame (middle top) to accept the new hook positions along both sides. This will result in the new diaphragm sitting quite tightly in the frame. Refit your foam and base cover.
