

BeFit and Flatine Grey, Batch variation

What is 'batch variation' and how can I avoid it?

Our factory produces the above tiles in 'runs' or 'batches'. Therefore, on production of every new batch the shades can differ slightly, this is due to changes with the substances used in the process, etc. This is called 'batch variation,' and it's incredibly common when making coloured rubber tiles.

To ensure all of your tiles are the same shade, we would recommend that you place your order for the full amount required at the same time.

Please note that the Flatline and BeFit are commonly produced at different times so they are likely to come from different batches.
