Concrete Sinks & Tubs Care & Maintenance Tips

1. These items have a special concrete sealant. The sealant is not scratch-resistant. Please avoid using rough fabrics or abrasive detergents. Please use a soft sponge or microfiber cloth with soapy water to clean it. The concrete should not be cleaned with toxic cleaners.

2. The concrete sealant is water-resistant and stain-resistant. It protects the concrete to a certain extent and penetrates it deeply to resist most water stain problems. However, the sealant will eventually wear out, so it is recommended to use wax paste once to twice a year to maintain its protection.

3. Wine, coffee, tea, cosmetics, toothpaste, and other similar substances have been successfully tested on the sealant. It is recommended to wipe the concrete surface immediately to avoid stains.

4. Concrete is wear-resistant, but not unbreakable. Please do not sit or stand on its edges or surface. Excessive weight on any area may cause cracks.

5. Please do not directly heat or leave hot oil on the surface of the concrete, and use protective pads to place hot cups, plates, etc.

6. Each product is handmade and unique. The product you receive may be slightly different from the image you see on the website. Variations are a natural part of this unique hand made item.

Characteristics of concrete material:

1. The surface color of concrete will never be one solid hue because it is made of a blend of materials. The change in tone and texture is natural and creates a unique luster, which is part of the concrete's original properties.

2. The item is made of a mixture of traditional stone, sand, and cement. In some cases, aggregates of material can be seen on the surface of the concrete, which are part of the unique, natural texture.

3. The liquid state of the concrete during the pouring process means that sometimes texture flow lines can be seen on the surface of the concrete. This is often more obvious when pouring on the curved or tall vertical surfaces, and is another typical feature of concrete.
