(2)

welcome

We are glad that you have chosen to partner with Canadian Spa Company on your path to wellness, relaxation and family fun time.

We started in the pool and spa industry 40 years ago with a vision – to make the benefits of hydrotherapy available to everyone. Over the last few decades, our team has worked diligently to perfect hot tub designs that include all of the features that we know our customers love in a readily available and affordable package.

We keep quality at the top of mind every step of the way, from the components that we use within our spas, to the hydro efficiency of our insulation and heat reclamation system, to the customer care and after sales service that we provide. This is part of the reason why our products have received numerous awards and accolades throughout the industry.

(3)

ACRYLIC SPA FEATURES

HYDROTHERAPY JET CUSTOMISATION Directional • Rotational • Adjustable • Interchangeable

There are two different styles of jets in our spas: directional, rotational.

Each type of jet provides a different feel to the overall hydrotherapy experience.

Adjustable

All jets are individually controlled and adjustable.

This includes the ability to increase/decrease the flow of each jet by rotating the faceplate which allows for complete control over the massage.

Directional Rotational

Interchangeable

Each jet can be interchanged with any other jet of the same size. This means ultimate individual customisation for every seat in the spa.

Our diverter valve lets you concentrate the full power of our large 5 HP pump to one or both sides of the spa giving you full control of the flow volume.

Every jet is equipped with an air control valve which controls the amount of air mixed into the water to further adjust the hydrotherapy massage pressure level and increase blood circulation.

COMPONENTS FROM LEADING MANUFACTURERS

CANADIAN SPA CO. HYDROMASSAGE BATHTUB PUMP	
Model WP500-II	SKU:KK-10319
High speed	
Hmax 14 m	Qmax 1120 L/min
220-240 V	50 Hz 15 A P: 3.7 kW 2900 r/min
Low speed	
Hmax 3 m	Qmax 520 L/min
220-240 V	50 Hz 4.5 A P: 0.75 kW 1450 r/min
PH1 Class 155(F) IP 55 CAP 50 µF/450V S1	
AMB 40°C Maximum Water Temperature: 50°C	
Thermally Protected	

Our industry leading 15A 5HP 2 speed pump provides more power than any other pump on the market to circulate the spa water and provide a deep hydrotherapy massage.

Automatically shuts heating off 1 degree from set temperature.

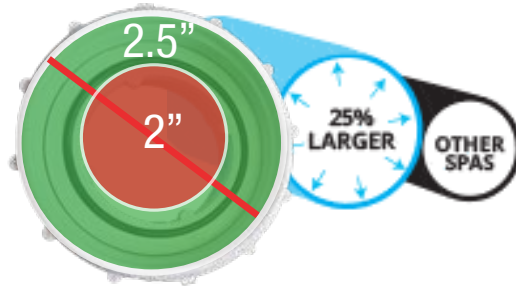

Our system uses the natural system heat to reach the desired setting!

Built in heater provides energy efficient hot water and is controlled by our digital control pack. Energy saving features and a daily purge to keep hot tub pristine.

EFFICIENT HOT TUB PLUMBING

Our oversized 2.5" intake is over **25%** more efficient than the industry standard of 2" for maximum flow.

No right angle restrictions in our plumbing means better flow-through and less resistance placed on the pump.

There is no twisted or rigid corners with our FlowFlex coil pipes, allowing for maximum water pressure.

For user safety, our spas are fitted with a vacuum brake, ensuring the suction inside the spa is cut off immediately if blocked.

ENERGY EFFICIENT BLACKOUT INSULATION = Low Cost

Our heat reclamation system works by storing and reusing the heat created by the spa equipment. Most heat generated by the spa is reused efficiently without being wasted. High-density black closed cell foam surrounds the shell protecting it from heat loss.

The waterproof base is designed with a layer of the same infrared reflective material found on the cabinet walls.

This prevents heat loss through the base saving money.

Cabinet panels are foam backed with an infrared reflective layer.

This creates a hot air barrier to trap and retain heat.

Introducing Black Out Insulation

Our New Black Out insulation will also increase the absorption of heat in materials up to 20%. Black objects are actually radiating more power than white ones, you just can't easily tell because that power is in a wavelength you don't see. Our innovative insulation is a industry first.

Black Out Foam Curtain Insulation

BACK GARDEN DELIVERY FORM

Upload your information to our site and our experienced team will provide you with a quote to move your spa from the kerb to your garden, and remove the packaging and install the accessories.

Cover Comparison

3" Skirt	4" to 2" Tapered Cover
Steam Stopper	5" to 3" Tapered Cover
Full Length Steam Stopper	Side Handles
5" Skirt	

Canadian Spa Cover:	Other Covers:
25% better insulation	Thinner cover
No heat loss through middle seam	Less heat efficient cover
Easy to lift cover from all sides	No side handles
Skirt completely seals spa	Shorter skirt does not seal spa

Warm air rises and the majority of heat is lost through the top of the spa, this cover helps to retain the heat.

SERVICE PORTAL

Our service portal has useful information on your spa. The FAQ section provides answers to your hot tub questions. Submit a ticket in our system and our global team will effectively solve your issue quickly and efficiently 24/7.

ACRYLIC SPA FEATURES

FILTRATION SYSTEM

Our Digital filtration system guarantees clear water using 75% less chemicals

Pre-Filter - Fine mesh screen to prevent your filters becoming clogged.

Silver-Ion - Embedded into the filter, acts as a natural disinfectant and our Microban® inhibits the growth of bacteria.

Mazzei Injector - Produces smaller bubbles and our ozone Mixing Chamber breaks up ozone bubbles for maximum absorption.

Ozone Purifier - Generates Ozone to aid in the oxidation of the spa water.

Mixing Chamber - Breaks down the ozone and helps absorb the ozone into the water.

UV - Neutralises the unabsorbed ozone and kills Bacteria in the water.

Insulated Spa Covers:

The energy efficiency of your spa is critical in determining how much your spa costs to run. Our covers are specifically designed to keep the heat in, even in the depths of a Canadian winter!

Our covers are 5" thick, tapering down to 3" - The taper allows snow or rain water to run off the spa easily. In addition, a heat seal between the two sides of the cover ensures no heat is lost from the hinge.

STANDARD FEATURES

ADJUSTABLE JETS

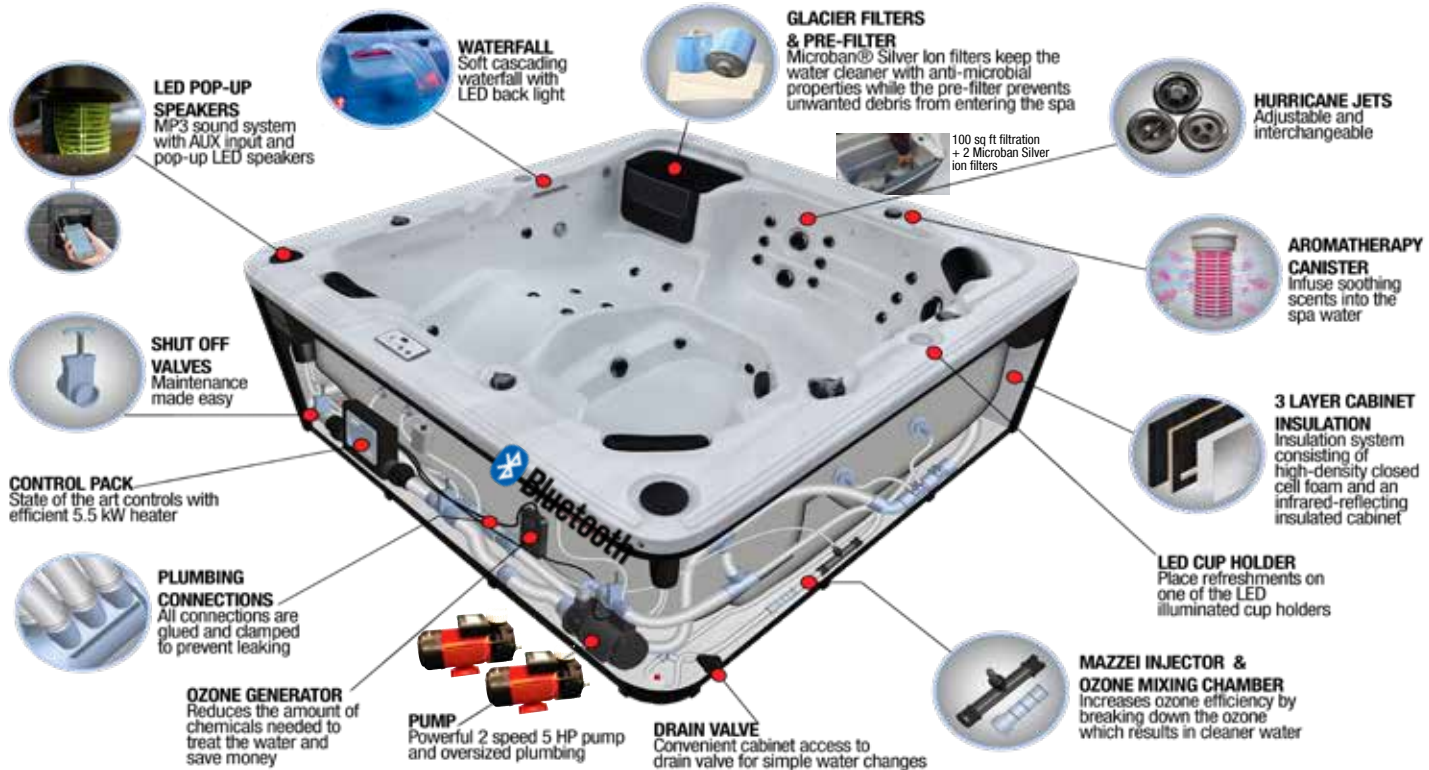

AUDIO SYSTEM

LED WATERFALL

EASY TO USE CONTROLS

AROMATHERAPY

OZONE PURIFICATION

DIVERSE SEATING ARRANGEMENTS

13' ST. LAWRENCE SWIM SPA

St. Lawrence 13ft swim spa
L390 x W228 x D137cm KS-10004 0700697210552

The 13 ft. St. Lawrence Sport Pool is perfect for swimming and aqua-aerobics alike. It has 3-river resistance jets, creating our unique swim lane system. The 3-water pumps and large flat floor make it ideal for a wide range of activities, like jogging against a gentle current and experiencing the benefits of resistance training.

The water flow is fully adjustable, allowing you to customise it for any level of activity. The 13 ft. St. Lawrence also functions as a hot tub, so after a good swim, relax with a soothing massage in one of the four multi-jet Captains' Chairs or a Full body 12 massage jet stand up area.

The built-in digital audio system with pop up speakers provides music entertainment, perimeter multi-coloured LED lighting, and 2-cascading waterfalls enhances relaxation. The waterfalls also act as a visual aid to keep your pace, all in the privacy of your own home.

Ideal for learning how to swim

Perfect for exercise and practice

Cost effective
Good insulation equals lower running costs. Most heat generated by the spa is reused efficiently without being wasted

Build quality
We build spas with the best components including Lucite® acrylic for strength and durability to withstand frequent use

L28'10" x W7'4" x D5'1"
KS-10007 0708296543637

Our new propulsion swim spa offers you 8 different speeds, includes tether and rowing systems as standard.

SAUNAS

SAUNA CABIN CONSTRUCTION

Why Hemlock Vs Cedar?

Hemlock has a neutral smell when compared with Cedar. Essential oils work better and lighter fragrances are easier to smell.

SOLID FRAME

Solid wall/stud wall, not particle or MDF board, stronger structure, less chance of warping.

PRE-MADE PANELS

Tongue and groove panelling on both sides, glued and pinned with nails.

Magnetic door excludes drafts.

8 mm Safety Glass & 180° Hinges

Our 180° Degree high quality hinges allow easy access to your sauna. Our thicker door and premium hinges allow for a snug fit.

100% WESTERN CANADIAN HEMLOCK

Our saunas are made from 100% Canadian Hemlock wood that is responsibly harvested according to FSC regulations

HOW SAUNA HEATING WORKS - HEATING THE BODY CORE

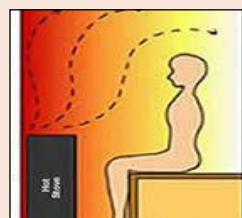

All sauna heating systems work in the same way to heat the core of the body.

TRADITIONAL SAUNA HEATING :

Traditional Saunas heat room to 70-80°C to get core to 40-50°C, they need a bigger room for the stove, not as efficient as infrared. High energy costs.

UNEVEN AND INEFFICIENT HEATING

Traditional saunas heat less effectively and create more heat at the top of the sauna with less heat at the base.

CANADIAN SPA - CARBON FIBRE FAR INFRARED HEATING:

Carbon fibre, even heating, low cost and operate at a more comfortable range, larger heaters with more wattage and all with low EMF levels.

EVEN SURROUND HEATING

Evenly distributes heat to a large area resulting in deeper penetration, better detoxification and heat retention. Health benefits start at lower heat, starting 32°C. You can set your sauna at a more comfortable temperature.

DIGITAL CONTROLS

Easy to view and change temperature settings with our digital control panel.

TIMER SETTING

Adjust the amount of time you wish to spend in the sauna at your desired temperature.

PRE-HEAT SETTING

Schedule your sauna time everyday by setting up a pre-heat time so that it is always ready when you want to use it.

Fig1. POWER & HEATING lights illuminated to show sauna in operation

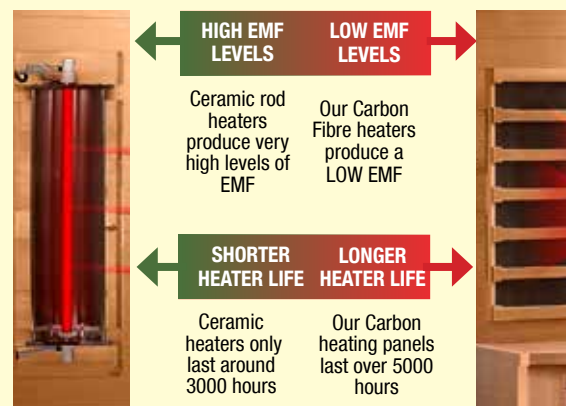

Fig 2. Press SET button and hours and minutes are displayed

CERAMIC ROD NEAR INFRARED HEATED SAUNAS:

UNEVEN HEATING

Targets heat in a limited area of the ceramic rod. Produces a shallow heat which does not penetrate far beyond the skin's surface. EXTREMELY HIGH EMF LEVELS

Our Infrared Saunas have some of the lowest EMF levels.

We test all our sauna's with people, showing our EMF readings where they count the most at head level

Jasper Sauna

Affordable Luxury

Canadian Spa Company introduces a sauna that boasts many of the features you would find on full featured saunas.

Jasper Sauna

Seats: 1
Size: 89 x 99 x 191 cm

Truss Structure

Our truss system is bolted together

Metal Straps

Strengthen the Gazebo by using steel strapping throughout the roof and rafters

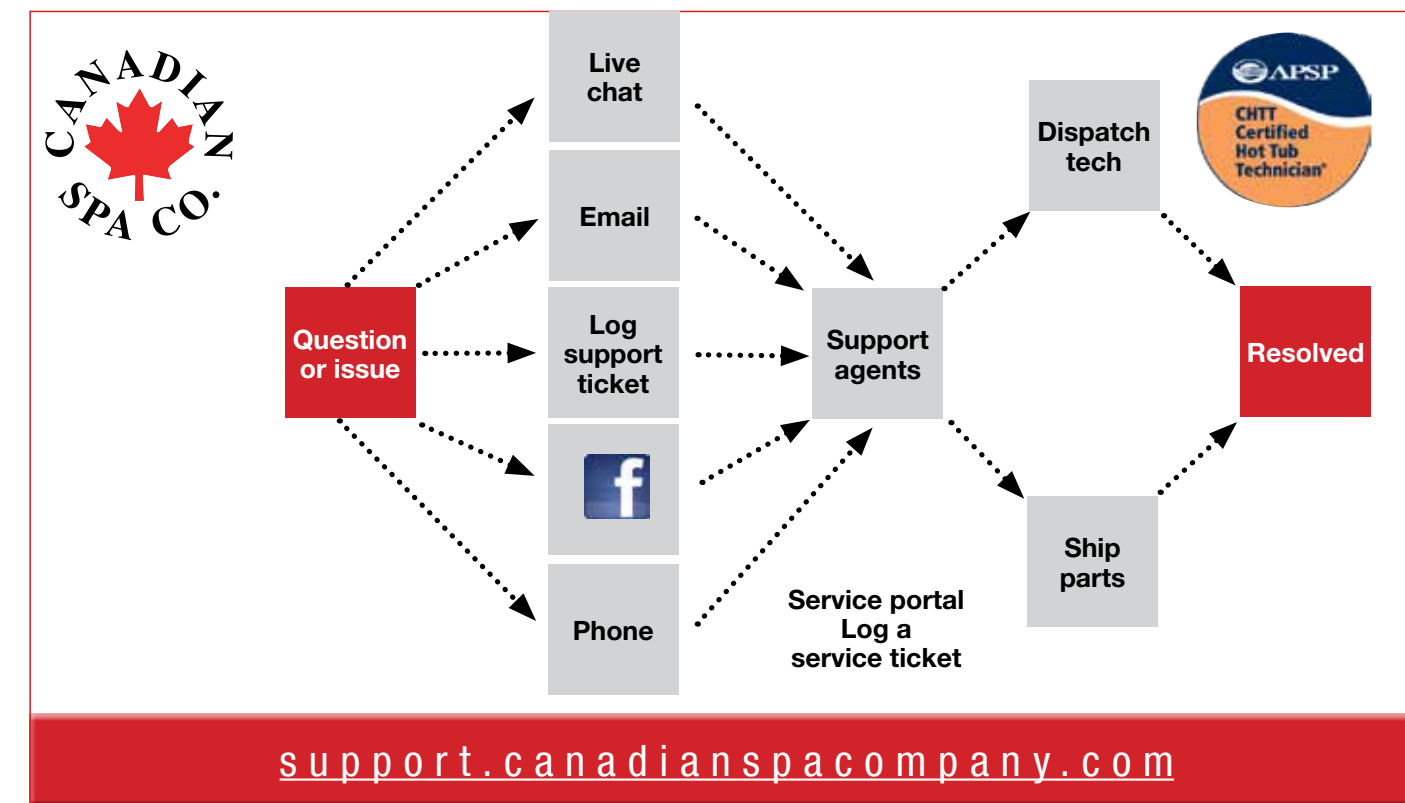

Metal Roof Dome Box

Strengthen the Gazebo by using a steel dome box

CANADIAN SPA CUSTOMER SERVICE

In the unlikely event that a customer experiences an issue we provide multiple channels to contact us. A specific ticket number will then be assigned to the customer/issue, which enables us to have all information in one place, from order status, any outstanding customer service issues to previous customer history. Based on the issue we then either send one of our local technicians or ship the replacement part to the customer. This is followed up with a short email to confirm that the job was completed to their satisfaction.

HOURLY SERVICE KL-10004

Our Qualified Technicians have years of experience in dealing with plumbing and electrical faults on all makes of spas.

Canadian Spa recommends a full service once a year. We provide various levels of service, contact us for details.

This will ensure that the spa components are working efficiently to provide you with the best spa performance.

- Spa servicing
- Hot tub repairs
- Spare parts
- Accessories
- Chemicals
- Maintenance services
- Experienced technicians
- Spa delivery and relocation packages

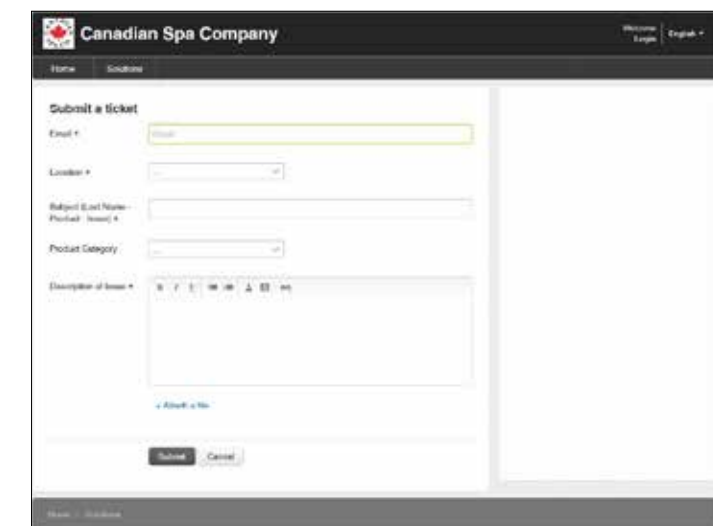

HOT TUB PARTS

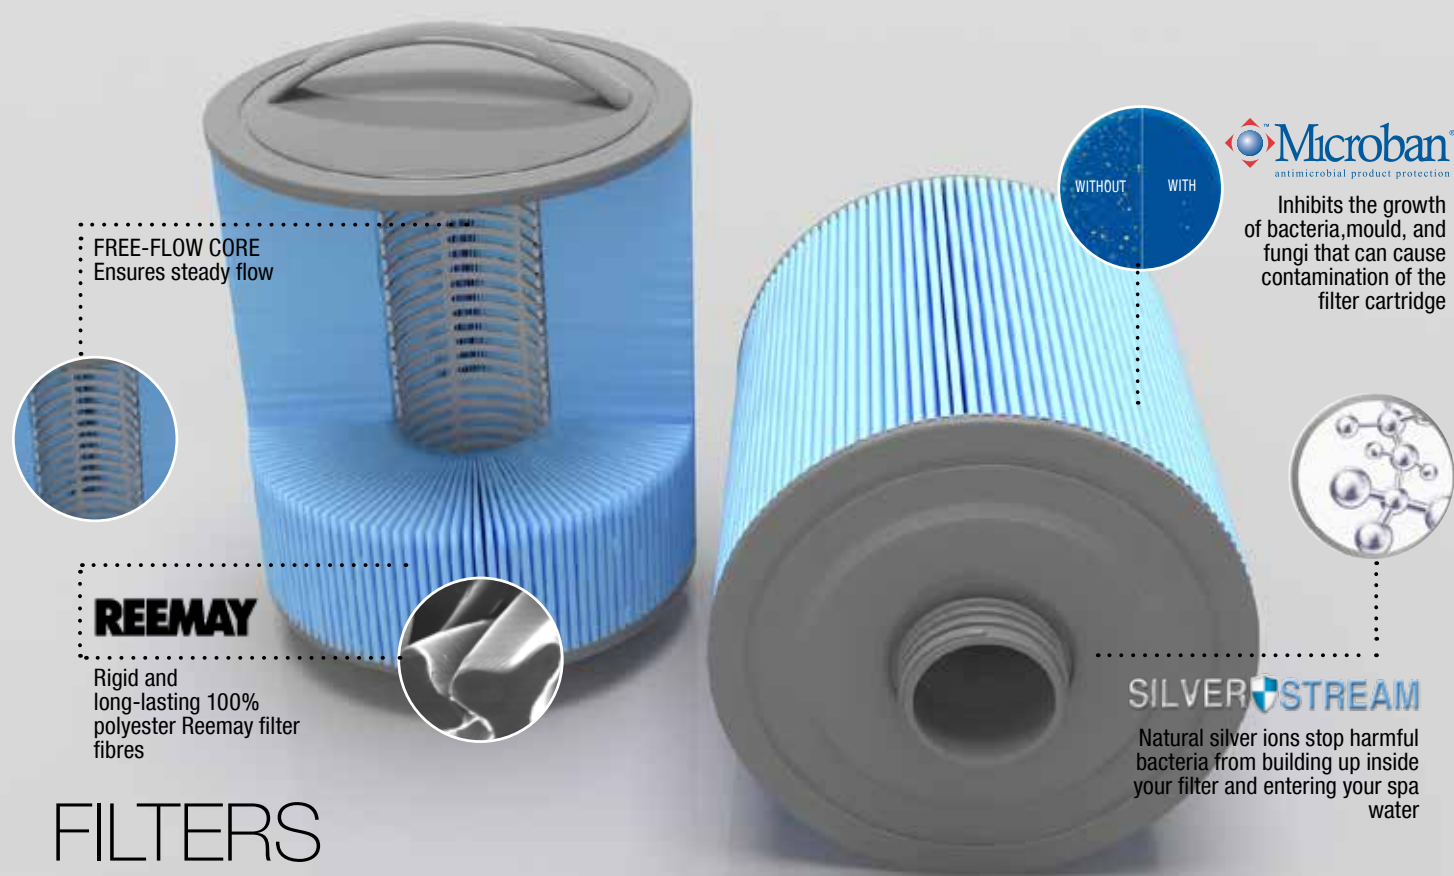

Canadian Spa Company can service and repair all makes and models of hot tubs and swim spas. Most spas can be retro fitted with our electrical and plumbing parts.

Check our website for a complete parts listing.

FAQ'S, Solution Centre

FILTERS

Increase the cleaning power of your spa with a Microban® spa filter!

Our filters are infused with Microban® antimicrobial protection to inhibit the growth of bacteria upon the cartridge and extend the filter's life. Silver ion technology is added into the end caps and fabric of this filter, making it the most advanced filter cartridge available. Break the cycle of bacteria growth when the spa is not in use and the high demand of chemicals once it starts up. Filter should be changed every 4-6 months for best results.

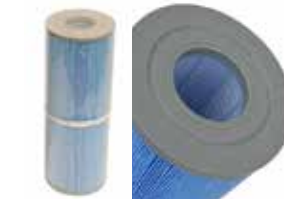

Microban® Glacier filter set for use with acrylic spas KA-10032 0700697210293

The Canadian Spa Glacier Filter pack contains two Microban filters with a silver ion slow release water purification system and a two pack of pre-filter screens to prevent debris from entering the system.

These filters are compatible with the Canadian Spa Grate filter system.

• Mounts directly to spa
• ABS construction
• 3 rollers per side up to 228cm
• 4 rollers per side over 230cm
• Requires 1/2 the folded size for clearance

SPA STEPS

POSITIONING OF YOUR SPA

When selecting a site for your spa, take into account the following:

Local Regulations:
There may be certain restrictions and/or requirements that are particular to your locality. If in doubt, check with your local council.

Delivery Passageway:
The spa will arrive as a unit, and cannot be disassembled. Ideally the spa will be placed on a trolley, either on its side or on its base. The unit will then be rolled into place easily crossing grass, gravel, and small terrain anomalies. If your access does not meet these conditions, or in the case of other obstacles (steps, fences, walls, steep hills, etc.) contact Canadian Spa Company for advice.

Privacy
Look at the direction you will be facing, from neighbouring windows, doors, trees or fences. Your hot tub location is very important to optimise your spa experience. A sheltered environment can result in lower operating and maintenance costs. You must allow 1metre clearance for access to the spa panel for servicing.
