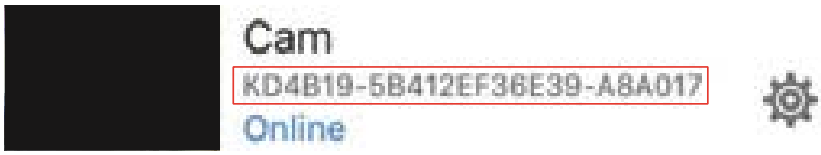
XI.notes on using.

1.What should you do when you use the Iphone to connect the wifi of camera but not working.
The speed of connection is slow when you use the iphone. The time is about 30 seconds.it does means the connection successfully when the wifi signal to be 4G network.

2.What should you do the video is not fluently and offline when you view the video.You can charge the camera. Cause the maybe is the battery in the low status.

3.You can not find the camera's wifi when you use the remote view function.so you can not connect the wifi of camera.you need to delete the camera ID which was before you connected .And then reset the camera. You can connect the camera's wifi again when you have done those steps.please see the pics :



5.The camera will be hot when you use it for a while . Please do not worry about that, case this camera is dissipating heat now. But do not use the camera in high temperature.

6.Please check the voice button is opening or not when you fund your camera can not hear the voice, first click is turn on,second click is turn off.

7.You can use the network of phone(4G) to view your camera when you use the remote view function.But please check your network is opening or not.you need to turn on the network if network do not opening.please see the pics.
