

Pitching your Glawning

STEP 1 - HAVE A BEER. Unpack & note how glawning is folded (for repacking!). Lay canvas on groundsheet with Glawning badge between 2 longer edges on the groundsheet and zip on. One zip runs around the long edge, and another zip joins the short section between the 2 doors, so just 2 zips need to be done up to attach the groundsheet.

Position the doors where you want them and peg out the glawning using the small pegs through the elastic or orange webbing loops (no need to peg the metal groundsheet eyelets - these are for when the sides are rolled up). **See fig 1**

Zip canopy to main tent using zip around door. **See fig 2.**
TOP TIP: It is easier to zip around the door apex if you turn the canvas hood inside out.

Peg out the canopy section. **See fig 3.**

STEP 2 - Put in the centre pole and the 2 x door A frames (the A frames should not be fed through the canvas loops inside the awning – these loops are for tying the door back – they just need to sit in the two feet pockets on the floor). **TOP TIP:** Place your feet where indicated in **fig 4** to make this easier. Put the plastic rain caps on top of the A frames (these go OUTSIDE the canvas). You are now ready to connect to the van - **see Fig 5**

Put the pole through the sleeve on the canopy if you're connecting with a pole and clamp kit. Otherwise, connect the canopy to the van by sliding the the beading into an awning rail. More information on connecting can be found on the next page of this manual.

STEP 3 - Tie the guy ropes on if they're not already tied on (you only need to do this the first time) and peg out loosely at first (with the big pegs), with the ropes following in line with the seams of the tent, before tightening gradually and evenly until the skirt of the glawning is vertical **See fig 6.** . Have another beer while you stand back and admire your handiwork.
