

1000 mL Manual

Top-dispensing  
for superior  
performance

The EZ Foam® upper push pad placement lets users see the amount of product being dispensed, thus reducing over-dispensing. And, by placing the dispenser pump at the top rather than the bottom of the dispenser, there is less risk of leaking at the valve.

**EZ Foam® advantages:**

- Fits both foam and liquid products
- Wide variety of hand soaps and sanitizers
- Secured keyed locking option included
- Large view window with product identification label
- No metal parts or springs, ideal for wet conditions
- Durable plastic housing
- Easy to install and maintain
- Refill labels are in English, French and Spanish

Keyed locking option
