

Getting Started with ISOMELTS™

Isomalt made easy! Simply melt in the microwave to create fun edible decorations for your desserts!

THE BASICS

WHAT ARE ISOMELTS™?

Say goodbye to tempering isomalt crystals! Satin Ice Isomelts™ are pre-cooked nibs made from high quality 100% pure isomalt and are ready to use! Isomalt is a sugar substitute that does not crystallize and sets crystal clear. Simply melt in the microwave and you are ready to create fun candies and decorations for your desserts!

WHAT ARE THE ESSENTIAL TOOLS NEEDED TO WORK WITH ISOMELTS™?

Heat-proof gloves, high quality silicone mats, molds & cups, silicone spatula, chef blow torch

NUTRITION:

Vegetarian, Gluten Free, NON-GMO, Kosher Pareve

WHAT COLORS OF ISOMELTS™ ARE AVAILABLE?

Pink, Green, Red, Blue, Yellow, Clear

WHAT CAN YOU MAKE WITH ISOMELTS™?

Hard candies, lollipops, cake toppers, fun shapes and special effects!

WHAT FORM DO ISOMELTS™ COME IN?

Isomelts™ come in small pillow-shaped nibs that are ready to melt!

HOW MANY LOLLIPOPS CAN YOU CREATE WITH 1 BAG OF ISOMELTS™?

10 Round 2" lollipops

HANDLING

IMPORTANT SAFETY INFORMATION:

Keep out of reach of children. Choking hazard. Extremely hot when melted and can burn skin on contact. For protection, wear heat-proof gloves and long sleeves.

HOW DO I MELT THE ISOMELTS™?

Microwave

Place Isomelts™ in a microwave safe cup (e.g. silicone). Melt in 20 second intervals until liquid and bubbles form.

Stovetop

Place Isomelts™ in a pot over low to medium heat. Stir gently as the nibs begin to melt. Do not overheat.

CAN YOU FLAVOR ISOMELTS™?

Create custom flavors by mixing in desired oil-based flavor to the melted isomalt. We recommend using oil-based flavors because it will not evaporate.

CAN YOU COLOR ISOMELTS™?

Create custom colors by carefully mixing in Satin Ice water-based food color gel to the melted isomalt while it is still bubbling. This way the extra moisture from the food color gel burns off to prevent stickiness.

CAN ISOMELTS™ BURN?

Isomalt can withstand high heat but can burn with significant overheating.

CAN I REHEAT ISOMELTS™?

When melted properly, Isomelts™ can be re-melted again and again!

HOW DO I STORE THE CREATIONS I MADE WITH ISOMELTS™?

Store finished isomalt creations in an airtight container, at ambient temperature away from direct sunlight. If you live in a humid environment, place a food safe desiccant pouch inside the airtight container. Do not store in the refrigerator or freezer, the condensation will break down the isomalt.

HOW CAN I PREVENT BUBBLES IN MY FINISHED ISOMALT CREATION?

Once the Isomelts™ are heated, allow it to settle for 45-60 seconds so that the bubbles can dissipate. If bubbles still form, once your creation has cooled carefully pass over it with a chef blow torch. This will restore the clarity to the isomalt creation.

HOW DO I MAKE ISOMALT CLEAR AND SHINY?

Once the isomalt is cooled completely, use a chef blow torch and lightly pass over the isomalt with the flame. This will clear air bubbles and cloudiness.
