Cytek®
Aurora
Say Hello to a New Reality
A prodigy incorporating a unique combination of patent-pending innovative technologies that takes flow cytometry to the next level of performance and flexibility.

With up to five lasers, three scattering channels, and 64 fluorescence channels, the Aurora suits every laboratory’s needs, from simple to high-complexity applications. A paradigm shifting optical design provides unprecedented flexibility, enabling the use of a wide array of new fluorochrome combinations without reconfiguring your system for each application. The state-of-the-art optics and low-noise electronics provide excellent sensitivity and resolution. Flat-top laser beam profiles, combined with a uniquely designed fluidics system, translate to outstanding performance at high sample flow rates.

The end result is a system that delivers high quality data where rare and dim populations are easily resolved, regardless of assay complexity.

SpectroFlo® software offers an intuitive workflow from QC to data analysis with technology-enabling tools that simplify running any application.

The Cytek team has reimagined every aspect of cytometry hardware and software to deliver an instrument that fulfills every scientist’s needs.

Maximum Channels

64 fluorescence channels of detection over the full emission spectra.

Maximum Colors

Beyond 30 colors demonstrated including fluorochromes with emission spectra in close proximity to each other.

Maximum Sensitivity

Sensitivity redefined using state-of-the-art optics and low-noise electronics.

Maximum Flexibility

No changing optical filters for any fluorochrome.
Use any commercially available fluorochrome excited by the onboard lasers.

Maximum Accessibility

A powerful, high value system that is accessible to a wide range of users.
Aurora’s Revolutionary Technologies: From Vision to Reality

The Aurora is capable of up to 67 detection channels (64 fluorescence channels, FSC, blue laser SSC, and violet laser SSC) and is empowered by revolutionary technologies, including:

- Proprietary high sensitivity Coarse Wavelength Division Multiplexing (CWDM) semiconductor detector arrays, enabling more efficient spectrum capture for dyes emitting in the 365-829 nm range.
- High bandwidth electronics design scalable up to 67 channels.
- Robust vacuum fluidics system enables ultimate flexibility in sample input formats.
- Exceptional small particle detection is enabled by violet laser scatter, narrow beam height, and proprietary flat top laser design.
Resolving Challenging Dye Combinations

The detection of some fluorochrome combinations by conventional flow cytometry presents a challenge due to high amounts of spectral overlap (Figure 1, 4). The Aurora addresses this challenge by using differences in full emission spectra signatures across all lasers to clearly resolve these combinations, even if the populations are co-expressed (Figures 2, 3, 5, and 6).

**Example 1: APC and Alexa Fluor 647**

![Figure 1](image1.png) Spectrum plots from a conventional spectrum viewer shows heavy overlap between APC and Alexa Fluor 647.

![Figure 2](image2.png) Spectrum plots from a four laser Aurora show distinct signatures for APC and Alexa Fluor 647.

**Example 2: BFP, GFP, and mCherry**

![Figure 4](image4.png) Spectrum plots from a conventional spectrum viewer.

![Figure 5](image5.png) Spectrum plots from a four laser Aurora show distinct signatures for BFP, GFP and mCherry.

**Figure 3**: Whole blood from a healthy donor was stained, lysed, washed, and analyzed on a four laser Aurora system. Subsets of NK and NK T cells that co-express CD56 Alexa Fluor 647 and CD8 APC were easily identified. For comparison, blood from the same donor was stained with CD56 PE and CD8 APC and yielded similar percentages of NK and NK T cells, demonstrating that APC and Alexa Fluor 647 combined did not impact results.

**Figure 6**: AB2.2 mouse embryonic stem cells were genetically modified to stably express BFP, GFP and mCherry under the control of different fate marker promoters. The stable cell line generated was then cultured under differentiation conditions, harvested, and analyzed on a four laser Aurora system to assess the expression of fluorescent proteins. Autofluorescence extraction was used to enhance results. Sample courtesy from Luigi Russo, Hannah L. Sladitschek and Pierre Neveu, Cell Biology & Biophysics, Neveu group, EMBL.
See More Clearly with Autofluorescence Extraction

Aurora’s implementation of full spectrum cytometry enables the use of autofluorescence extraction to further improve data clarity. Certain sample types, such as yeast and tumor samples, present the challenge of high autofluorescence. For these challenging applications involving highly autofluorescent particles, let the software’s autofluorescence extraction tool bring new levels of resolution.

Example 1: PrimeFlow™ RNA Assay

Human U937 cells were subjected to the PrimeFlow™ RNA Assay. The cells underwent a series of hybridization steps to label mRNA for HMBS, a low expressed gene (~10 copies/cell), with Alexa Fluor® 488. The sample was run on the Aurora and analyzed using SpectroFlo® software with two different strategies, one with autofluorescence extraction and one without.

Due to high sample autofluorescence, negative and positive cell populations were nearly indistinguishable (left plot). Autofluorescence extraction greatly improved the resolution of the two cell populations (right plot).

Example 2: mCherry Expressing HeLa Cells

HeLa human cells were transformed with a CRISPR-Cas9 target vector carrying an mCherry reporter. Expression of mCherry is driven by the endogenous promoter of the knocked-in gene. The cells were harvested 32 hour post-infection and analyzed on a four laser Aurora system to assess integration of the fluorescent protein. Autofluorescence extraction was used to enhance the resolution. Sample courtesy of Malte Paulsen, Flow Cytometry and Cell Sorting Facility, EMBL.

Due to high autofluorescence, separation of negative and positive signals was marginal (left histogram). Autofluorescence extraction greatly improved the resolution of the two cell populations (right histogram).

PrimeFlow™ is a trademark of Thermo Fisher Scientific.
Small Particles in Full View

With its onboard 100 mW 405 nm laser and highly sensitive violet SSC detector, particles nearing 100 nm in size can be analyzed. Aurora opens the door to a wide variety of small particle applications, taking what was once hidden and placing it in full view.

Example 1: ApogeeMix

Resolution of ApogeeMix from Apogee Flow Systems (www.apogeeflow.com), a mixture of silica and polystyrene (PS) beads ranging from 110 nm to 1300 nm, when acquired on the Aurora. The smallest particles can be easily identified above background.

Data analyzed using FCS Express 6 by De Novo™ Software.

Example 2: ViroFlow

Murine Leukemia Virus (MLV-124 nm ±14 nm) genetically engineered to express superfolder GFP (sfGFP) as a fusion protein with the viral envelope glycoprotein.

The plots on the right show:
A) Buffer only
B) MLV with no sfGFP (MV-M-Zero)
C) MLV with sfGFP-Env (MV-M-sfGFP)

All samples were run on a three laser Aurora using violet SSC as a threshold trigger. Virus reference particles were provided by ViroFlow Technologies (www.viroflowtechnologies.com).

Data analyzed using FCS Express 6 by De Novo™ Software.
More Choice, Greater Flexibility, Easier Setup

The optical design combined with the unmixing capability in SpectroFlo® software allows greater fluorochrome choice, panel flexibility, and easy setup without having to change filters. The three laser configuration provides outstanding multi-parametric data for a wide array of applications. Markers and fluorochromes in a 24-color panel designed for identification of circulating cell subsets in human peripheral blood are summarized in the table below:

Cytek® Aurora
Say Hello to a New Reality
SpectroFlo® Software Guided Workflows

The new SpectroFlo software offers an intuitive workflow from QC to data analysis with technology-enabling tools that simplify running any application.

**QC and Setup:**
Run Daily QC to monitor instrument performance and add reference controls.

**Library:**
Add or remove experiment templates, worksheet templates, fluorochrome information, QC bead information, and more.

**Extra Tools:**
Unmix data using controls from different experiments or apply virtual filters to your data.

**Users:**
For administrative controls.

**Preferences:**
Customize the software appearance. Set default plot sizes, text sizes and fonts, gate colors, print layout, statistics table options, and more.

**Experiment Workflow:**
From the Acquisition menu, you can start a new experiment and get to your data in three simple guided steps.

**Step 1: Create Your Experiment**
Create your experiment, choose fluorochromes, and add labels, tubes, worksheets, and stopping criteria in this guided workflow.

**Step 2: Acquire Your Tubes**
Load and acquire your samples.

**Step 3: Unmix Your Data**
Visualize your reference controls spectra using our unique unmixing wizard.
Get to Know Our Automatic Micro-Sampling System (AMS)

Meet the AMS

The AMS offers preset and user adjustable settings that allows the loader to be fine tuned to your experimental requirements. The AMS is specifically designed to streamline experimental workflow and seamlessly integrates into the Aurora. The AMS also offers ease of use and low carry over.

- **Reliable and easy**
  - **Reliable** 96 well plate acquisition maximizes productivity.
  - **Easily change** between plates and tubes in a matter of seconds.

- **Three throughput modes**
  - **Optimized** acquisition speeds, from low carry over to high throughput.

- **User customizable modes**
  - **Fully customizable** with a suite of user modes to fit a variety of applications and workflows.
We Are Here to Support You

Cytek Biosciences is dedicated to enhancing our customers’ user experience. The Aurora system is backed by our world-class service and support team that can provide phone or field based assistance. Various levels of maintenance options are available to meet your needs now, and in the future.

Technical Support

We have a worldwide team of field service engineers and technical application specialists at your service. To maintain your instrument and keep it running well, you can choose the right service contract for your needs. Our technical applications specialists are here to support you with application related questions such as troubleshooting experiments, understanding or troubleshooting software behaviors, and more.

For help choosing the right service contract, contact your sales representative at sales@cytekbio.com.

For service and application support, contact us at support@cytekbio.com.

Training

We offer two days of in-depth, interactive, hands-on training with each new instrument installation. If you later have a need for additional training, we offer a shorter one day refresher option. To learn more, speak to your Cytek sales representative or email us at sales@cytekbio.com.

Online Resources

As Cytek grows so will the tools on our website to enhance your experience with your full spectrum cytometer. For example, you can interact with other Aurora and Northern Lights users and our technical applications support staff in the Aurora User Community (contact your sales representative to learn how to activate your account). Need to learn more about dyes used on the Aurora? Click on the reagents tab to find panel design examples and other optimization tools.

Visit www.cytekbio.com regularly as we introduce more exciting tools throughout the year.
Specifications

**Optics**

**EXCITATION OPTICS**

**OPTICAL PLATFORM**
Aurora contains a fixed optical assembly with the capacity to be configured with up to five spatially separated laser beams. Laser delays are automatically adjusted during instrument QC.

**LASERS**
Base model three-laser configuration: 405 nm: 100 mW, 488 nm: 50 mW, 640 nm: 80 mW
Available laser upgrades: 355 nm: 20 mW, 561 nm: 50 mW

**BEAM GEOMETRY**
Flat-Top laser beam profile with narrow vertical beam height optimized for small particle detection.

**EMISSION OPTICS**

**EMISSION COLLECTION**
Fused silica cuvette coupled to high NA lens for optimum collection efficiency to optical fibers.

**FORWARD AND SIDE SCATTER DETECTION**
FSC: high-performance semiconductor detector with 488nm bandpass filter
SSC: two high-performance semiconductor detectors with 405nm and 488nm bandpass filters

**FLUORESCENCE DETECTORS**
Proprietary high sensitivity Coarse Wavelength Division Multiplexing (CWDM) semiconductor laser array per laser enabling more efficient spectrum capture in the 365-829 nm range. No filter changes required for any fluorochrome excited by the 355 nm, 405 nm, 488 nm, 561 nm, 640 nm lasers.

**STANDARD OPTICAL CONFIGURATION**
Violet detector module: 16 channels unevenly spaced bandwidth from 420-829 nm.
Blue detector module: 14 channels unevenly spaced bandwidth from 498-829 nm.
Red detector module: 8 channels unevenly spaced bandwidth from 652-829 nm.
4 and 5 Laser Options:
Yellow-Green detector module: 10 channels unevenly spaced bandwidth from 567-829 nm.
Ultraviolet detector module: 16 channels unevenly spaced bandwidth from 365-829 nm.

**Fluidics**

**SAMPLE FLOW RATES**
Low: 15 µL/min, Medium: 30 µL/min, High: 60 µL/min, Plate high-throughput mode: 100 µL/min

**FLUIDIC MODES**
Long clean, SIT flush, Purge filter, Clean flow cell

**MANUAL SAMPLE INPUT FORMATS**
12x75 mm polystyrene and polypropylene tubes

**STANDARD FLUIDIC RESERVOIRS**
4L fluid container set with level-sensing provided. Compatible with 20 L sheath and waste cubitainers.

**VOLUMETRIC SENSOR**
Volumetric measurement during sample recording enables calculation of counts per µL for any gated population.

**PLATE LOADER OPTION**
96-well microtiter plate capability
Throughput time 35 minutes at High Throughput mode sampling 7 µL/well
Plate stage temperature: 4-30°C

**PLATE LOADER CARRYOVER**
Default mode: ≤0.3%, Low Carryover mode: ≤0.1%, High Throughput mode: ≤1%

**Performance**

**FLUORESCENCE SENSITIVITY**
FITC: ≤35 MEFL, PE: ≤10 MEFL, APC: ≤10 MEFL, Pacific Blue: ≤25MEFL
*Measurements based on an average from two systems, one three lasers and one five lasers, and performed using SPHERO Rainbow Calibration Particle (RCP-30-5A) based on its peak emission channel.

**FLUORESCENCE LINEARITY**
FITC R² ≥0.995 / PE R² ≥0.995

**FORWARD AND SIDE SCATTER RESOLUTION**
Performance is optimized for resolving lymphocytes, monocytes, and granulocytes.

**SIDE SCATTER RESOLUTION**
Capable of resolving 0.2 µm beads from noise.

**CARRYOVER**
≤0.1%

**DATA ACQUISITION RATE**
35,000 events/s*
*Three laser system

**Software**

**SPECTROFLO® SOFTWARE**
Live unmixing during acquisition
Developed specifically to streamline assay setup, data acquisition, and file export
Automated QC module
Autofluorescence extraction
Raw and Unmixed FCS 3.1 files

**Electronics**

**SIGNAL PROCESSING**
Digital signal processing with automatic window gate adjustment.
22-bit 6.5 log decades.

Threshold using any single parameter or combination of parameters.

**PULSE SHAPE PARAMETERS**
Pulse Area and Height for every parameter. Width for scatter parameters and one fluorescence parameter for each laser.

**Workstation**
Workstation specifications may vary between laser configuration; below is for three-laser configuration.

**OPERATING SYSTEM**
Windows® 10 Pro 64-bit

**PROCESSOR**
Intel® Core™ i7 processor, 3.6 GHz

**RAM**
16 GB

**HARD DRIVE**
500GB SSD / 1 TB SATA

**VIDEO PROCESSOR**
NVIDIA® GeForce

**MONITOR**
32” UHD 4K Monitor
