

## Environmental Policy

Textile Technologies Europe Ltd is a responsible member of the community and operates a strict and vigorous environmental policy.

### The policy is designed to:

- Eliminate damage to ecology and prevent pollution of the environment.
- Maintain and improve the appearance of the company's premises.
- Promote good relations and communications between the company, local residents and authorities.
- Promote the efficient use of energy.

These aims are reflected in the attention given to Quality and Safety on site and the Company priority for good environmental practice fostered within its employees and to enhance environmental performance.

The Company makes every reasonable effort to minimise volatile emissions to atmosphere and to avoid pollution of the atmosphere, soil and watercourses in and around the site to ensure the protection of our biodiversity and ecosystems. Where possible waste products are recycled, but if this is not possible, they are disposed of in an appropriate, approved manner. Waste is never dumped on site.

Watercourses are protected to prevent pollution through accidental escape of chemicals and are monitored.

Contractors working on site are carefully controlled to ensure they maintain the same high environmental standards set by the company.

The visual appearance of the Company's buildings, office and grounds is upheld by regular maintenance and painting.
