

The fit of a ring varies according to its design. More or less as happens with clothing and footwear.

The fit refers to a ring's adaptability and closeness to the finger, and, regardless of size, can be defined as follows:

Standard,

close to the finger's actual size. The size matches the measured size.

Tight,

tends to resist when coming off.

It may be necessary to size up.

Roomy,

leaves space between the finger and the ring, may be too loose.

It may be necessary to size down.

HOW TO CHOOSE YOUR SIZE.

Find a ring, possibly a "band" type, that is exactly your size.

Use a ruler to measure the inside diameter of the ring and find the equivalent diameter of the circles: for example, if your ring has an inside diameter of 0.65", that corresponds to size 52. If the diameter falls between two sizes, choose the larger size.

For further confirmation:

- Print the size sheet and use a ruler to check the 1" scale at the bottom right: if the printed measurement is not correct (e.g. if you measure 0.75" with the ruler), DO NOT use it; try to make a printout with the correct scaling.

- Now choose your size by resting the ring on the sheet: the inside diameter of the ring must match the diameter of one of the circles.

If you wish to wear more than one of the same type of ring at the same time, it is advisable to choose slightly larger sizes for one or more of the rings.

For more information see the FAQ section.

MISURE	DIAMETRO in mm
46	14,65
47	14,97
