

## ROLLTOP SEATBAG™ INSTRUCTIONS

If these photos are unclear, view this as a PDF document online instead at [www.eogear.com/how-to/](http://www.eogear.com/how-to/)

# 3120-GIA RollTop SeatBag™ 12.0  
(Black + Gray)

On the top are two pair of webbing strips with slots for attaching other pouches, especially the eoGEAR Piggy-back Pocket.

D-rings for attaching gear.

This row of webbing is the DTS attachment point for piggy-backing extra pouches onto the sides of the bag.

### ASSEMBLY STEPS

**STEP 1** Attach the Rail-Rebar Adapter (RRA, Velcro straps with the aluminum bar sewn in) to the bottom of the rails, just above the *bend* of your saddle. Slip the Velcro straps up through the center of the rails and out to the side (similar to conventional wedge bags).

**STEP 2** After filling the bag, cinch down the main compression strap loosely. Slip the strap through the skinny webbing loop on top of the bag.

**STEP 3** Attach the Velcro strap to the seatpost. Hike it up as far as possible without deforming the shape of the bag. **BE SURE YOU HAVE PLENTY OF CLEARANCE** above the tire, especially when using a bike with rear suspension.

**STEP 4** Cinch down the side straps so they are very tight. Clip in the loose ends of the webbing.

**STEP 5** Cinch down the main strap more if needed.

Inside Compression Strap. Inside the bag is a compression strap for doing intermediate load squishing.

### 12.0 Bag Shown with Optional Accessories

eoGEAR Piggy-back Pocket on top (# 2125-K00)  
Attach with the zipper facing to the rear.

Equinox Horizontal Pack Pocket (# 4924-000)
