

## ECOBLEND

### Safe & Sustainable Weed & Pest Control

- OMRI Listed for organic use
- Organic & Non-GMO ingredients
- Replaces toxic pesticides and herbicides
- Balances cost & health
- Low volatility; not a flammable liquid
- Can replant after 3 days
- Improves health of pollinator habitats
- Reduces soil erosion and runoff
- Safe for animals, no toxic residue
- Meets sustainable practices for schools & parks
- Eliminates contamination of waterways

- **NO USE/REUSE RESTRICTIONS**
- **WON'T KILL BUSH/TREE ROOTS**

## PRODUCTS THAT WORK WITH NATURE

Organic & Non-GMO vegetable oils are sourced from farms largely in the southeast and turned into effective herbicides that quickly break down plant mass into beneficial nutrients that build up the soil. Once soil nutrients and populations of soil organisms are balanced, plant fertility is optimized, soils can retain water and nutrients, and water quality is enhanced.

Scientific proof, field trials and testimonials attest that EcoBlend works as well as conventionals to control unwanted vegetation. EcoBlend does not contain the toxic chemical compounds found in conventional products.

EcoBlend is completely biodegradable and does not contaminate soils or water with toxins. Since EcoBlend is not systemic, it is safer around bees & other pollinators. In fact, bees have been coexisting with the ingredients found in EcoBlend for thousands of years.

Better for the BEES!

Effective, natural solutions that work WITH NATURE  
To achieve sustainable measures & principles  
In a CHANGING WORLD.

## SELECTIVE OR TOTAL VEGETATION CONTROL

### ECOBLEND ADJUVANT

- EcoBlend Adjuvant is OMRI Listed for organic use. It is Industrial grade for non-food crops.
- Adding EcoBlend Adjuvant enables the EcoBlend Herbicide Active to penetrate plants and soils and is especially effective in woody stem plants, but can be used based on concentration to clear vegetation or to selectively control woody stem plants without harming grasses and other types of vegetation.
- Add 1 part Adjuvant to 1 part EcoBlend Herbicide and then use at 20 ounce per gallon or greater to kill all vegetation. The adjuvant will penetrate the ground to kill the roots in grasses at concentrations above 20 ounces per gallon.
- For selective control of woody stem plants such as briars less than 6 inches, mix 1 part Adjuvant to 1 part EcoBlend Herbicide and then use at 5 ounces per gallon but less than 20 ounces per gallon to kill woody stem plants without killing grasses and other vegetation types. Test a small area first and wait 1 week to ensure desired results.

**Kudzu**

**Pines & other woody stems**

**EcoBlend Adjuvant is made from GMO-Free ingredients.**

This patent pending product is made with methylated seed oil and emulsifiers. The adjuvant enables herbicide actives to penetrate plants and soils while also providing surfactant, sticking and defoaming properties to the herbicide.

**No re-use restrictions, rainproof**
