

PF-R™

PLATEFRAME-REDUX

The PF-R™ out-performs all other carriers in its class in performance, comfort, and modularity. Other than the S&S PF-M™, it is the only armor carrier system with the **patented (US 10605574)** adjustable Auto-Fit Cummerbund™ and thoracic load-bearing technology. By using a single layer of semi-rigid composite material with laser-cut MOLLE/PALS slots, we were able to keep the overall weight to just over 1 lb. When properly fitted, the PF-R's Auto-Fit Cummerbund™ helps to distribute the weight of the operator's loadout across their entire torso while still allowing for expansion of the chest and lungs. Together the Auto-Fit Cummerbund™ and lightweight, hydrophobic plate wrap system help the user to feel comfortable, while offering impressive strength and durability even under heavy load.

Optional add on Interior Load Bearing Wings

OSS REDUX

OPERATOR SYSTEM SUITE (OSS)

The OSS Redux is a series of minimalistic and practical set of pouches designed to be paired with our PF-R™, yet versatile enough to be used with any of our carriers or standard MOLLE/PALS webbing system. This series is constructed of light-weight, hydrophobic material that is durable, long-lasting and will shed water to reduce weight in wet environments.
