MOUNTING POST

FOR ALL APPLICATIONS

DKS offers a full range of mounting posts to meet your specific needs, whether for vehicular traffic or pedestrian traffic requirements.

Standard

The standard posts are used with card readers, keypads and smaller access control devices. A dual-height style is also available for applications that have both vehicular and truck traffic using the system.

Architectural

Architectural style posts are typically used with the larger telephone entry systems and are available in offset styles for vehicular traffic or straight styles for walk-up pedestrian use. Supplied as either pad mount or in-ground models.

Designer

Available in an offset configuration for vehicular traffic, or straight for walk up pedestrian use. Pad mount style only, and require adapter for in-ground mounting. Includes an electrical compartment that can house accessory transformers, surge suppressors and a radio receiver. Additionally, the optional light extension provides exceptional illumination.

Kiosk

The mounting kiosks are ideal for walk-up pedestrian applications, but can also be used in some vehicular traffic applications. These kiosks are designed for DKS flush mount telephone entry systems only. Includes an electrical compartment that can house accessory transformers, surge suppressors, and a radio receiver. Ultra bright LED lights provide illumination on the entry system.

All posts can be pad or in-ground mounted using either the base plate adapter for pad mount models, or the in-ground models which do not have a base plate and extend an additional 24 inches in length.

Standard Card readers, keypads and smaller access control devices. Square Horizontal Vertical Architectural Larger telephone entry systems. Full Case (except Offset Small)

1. Tough

 Enamel finish is baked on for durability and weather resistance.
