

CELLOPENER-365

GSM ACCESS CONTROL

This GSM access control system allows up to 2000 registered users to operate any garage door / gate using their phone with no cost for the call to the user. This simple to use access control system uses a GSM SIM card that must be activated upon installation. Simply dial the associated phone number for the SIM Card from any phone or mobile-phone and the gate will open without any cost of a call to you. The CellOpener-365 also allows for an input contact to be used to trigger a SMS text message to a property manager letting them know that someone is at the gate or door.

In addition, the unit offers Weekly Timer and 365 Day Timer capability to offer maximum security and allow a property manager to prevent a gate or overhead door from opening on certain days and times such as national holidays or special events. The current date and time is automatically set via the GSM network so there is never a reason to ever make adjustments for daylight savings time.

All programming of the CellOpener-365 occurs using simple SMS text commands. This feature allows programming to be done remotely from anywhere in the world making life easy for maintenance, security and HR staffs that need to enable or disable an individual person's access to a site.
