

## 9013 Series Solar Bollard Light Instructions

Thank you for purchasing our 9013 series Solar Bollard Light. They are easy to operate. Please set your fixture outside in full Sun for 3 days on the off position to charge the battery. You can choose between 3,000K warm white or 6,000K cool white. To turn on the fixture locate the toggle switch (pictured below) It is located just underneath the top section. Center position is off. Switch left or right to choose either cool white, or warm white. Due to the many surfaces and methods of mounting we do not supply mounting hardware. It is very important to mount these fixtures in an area that receives full sunlight for at least 8 hours for maximum efficiency.
