

INSTRUCTIONS

Items you will need: Foam board (at least 24" x 36"), an exacto knife, box cutter or similar (make sure the cutter is sharp to help keep your cut edges clean), plastic sheeting or similar to cover the table, acid free spray adhesive and a old gift card or squeegee for smoothing the poster down once you apply it to the foam board

Cut out the white center portion of the poster using the black dotted lines as your guide. If any part of the center contains a graphic that is part of the frame be sure to cut around that graphic to prevent releasing it from the poster. Use the portion you just cut out of the poster as a template for the area you need to cut out on your foam board

Lay the foam board on a flat surface but away from the area you will use to spray the poster with adhesive

Place the poster face down on a sheet of plastic or similar to protect the surface around the poster from over spray.

Spray the back of the poster lightly with an acid-free spray adhesive.

Touching only the edges pick the poster up carefully and then position it on the board.

Smooth the poster from the center to the edges, using either the side of your hand, an old gift card or squeegee

We hope you and your guest enjoy your party!

Thank you
