

PERFORMANCE

Hextagrip traction outsole gives golfers one of the lowest profile golf shoes on the market giving the ultimate connection to the ground and perfect balance through every swing.

LIGHT WEIGHT

Reduce leg fatigue for greater performance down the stretch. The lightweight, flexible EVA material that each Biion is made of keeps you light on your feet, and comfortable before, during, and after your game.

FORM FITTING

Biions HEXcell nano molecular EVA technology forms to your foot giving you a performance golf shoe with a precision fit.

BIIOVENTS

Maintain comfort throughout your game. Biion begins by keeping your foot cool with 54 strategically placed ventilation holes throughout the shoe.

FOOT THERAPY

Look inside. The massage nodes within every Biion shoe give your feet a therapeutic sensation with every step.

SHOCK ABSORBING

Dual density, energy-return midsole. The Biion shoe works with the golfer, allowing for the natural movement of your feet through every step, and every swing.

MORE GRIP, LESS SLIP

Biion's spikeless HEXTRA-GRIP tread provides outstanding traction, strength and stability in your swing.

A weightless precision golf shoe equipped with an EVA upper that hugs your foot, yet remains flexible, giving you both reassurance and very little resistance in your swing. It's like golfing bare foot.

The dual density mid-sole is a remarkable shock absorber that gets you through your game with amazing comfort. We've worked with golf professionals and orthopedic therapists focusing on fit, pressure points and support to design an inner foot-bed that compliments all of the above.

Not only does this improve your golf game technically, it makes it more enjoyable. Isn't that the point?
