## DIET OVERVIEW

The diet provides moderate levels of protein and moderate (but controlled) amounts of dietary fat and is suitable for all life stages including the growth of large sized dogs. It is a highly digestible alternative low in insoluble (bulk-forming) fiber but with moderate amounts of soluble (prebiotic) fiber for dogs predisposed to recurrent gastroenteritis of unknown cause. Protein levels should support lean body mass. Mono- and poly-unsaturated fatty acids support normal skin and coat health without producing a high fat diet. Oregano may help with digestion.
