### ✓ INDICATIONS

- Dogs with kidney disease (IRIS Stage 1-4)
- Dogs with glomerular-losing nephropathy
- Dogs who have refused other renal diets

### X CONTRAINDICATIONS

- Healthy dogs of any age
- Dogs with pancreatitis
- Dogs with a chicken allergy

### ADDITIONAL INFORMATION

Formulated for the long-term feeding of dogs with IRIS Stage 1-4 chronic kidney disease.

Our Renal Support: Chicken + Pumpkin diet provides high levels of fat and a moderate level of protein. It's formulated for the long-term daily feeding of dogs with kidney disease in all life stages. This diet provides 50% more protein than other renal diets but with similar levels of phosphorus restriction, in order to maintain or improve lean muscle mass while reducing progression of underlying kidney disease. Highly palatable, elevated fat sources are included to encourage normal appetite.
