AAFCO STATEMENT: Formulated for the long-term feeding of dogs with IRIS Stage 1-4 chronic kidney disease and pancreatitis.

SUMMARY: The low fat renal diet represents an innovation for dogs with kidney disease and either fat intolerance or pancreatitis. The diet is designed with a highly palatable base of chicken and rice to help prevent the food refusal common in kidney disease. Egg whites and lean chicken provide moderate levels of protein (74 g/1000 kcal) while reducing the phosphorus level significantly. The diet is high in EPA to help maintain kidney filtration. The fat level is at or below other therapeutic diets for pancreatitis (<17 g/1000 kcal).
