DIET OVERVIEW

The diet was designed to be highly-digestible, rich in omega-3 fatty acids DHA and EPA, and to contain novel palatable vegetable and fruit sources of nutrients. The diet is moderate in protein and in fat. However, the fat content is lower than in many other OTC salmon diets based on the leaner salmon fillets used in preparation of the diet. It is appropriate for puppies, and the elevated DHA levels may help cognitive performance. Sweet potato and sushi rice are low-residue (low-fiber) sources of carbohydrates. Sesame oil and coconut aminos are added to maintain a normal skin barrier.
