

# Agent Belt

The Agent is a 5+1 belt design. It is heavy. The same weight and thickness as a police duty belt. The form, cut, stitching, finish and buckle give the appearance of a standard dress belt. The Agent is constructed of two pieces of top grain steer hide that have been laminated and stitched together with a finished top support edge. As a result, the Agent provides a platform that will support the equipment required by a law enforcement professional. Firearm, ammunition, light, baton, handcuffs.

Standard dress belts have five round holes. Agent tongue slots are elongated for ease of insertion.

This is an open design. The buckle retains the end of the strap without need of a belt loop. It has a distinctive clean smooth appearance. The plus one design allows the belt to be loosened one inch to accommodate an inside the pant holster.

Agent buckles are interchangeable. They are available in black, brass and brushed nickel. Each has an engraveable panel. They are held in place by two custom Strike Force® screws. The anchors are secured by the same 1/16" hex socket that is used on all ASP cases and carriers.
