

Alert Safety Whistle

The engineering polymer of the Alert Safety Whistle is extremely strong, yet feather light. The Alert may be attached to a keyring or lanyard by the chrome plated split ring.

The black whistle is available alone for every day carry. It is also offered with a tooth guard for added safety. A black breakaway lanyard is useful when directing traffic. A red lanyard edition is available for training.

The piercing tone of the Alert is the result of advanced sound engineering, a Spanish cork ball and rigid frame design. The sound is distinctive and intense.
