220 lumens out of 2 AAAs

» ASP's Scribe is one of the flashlights used in the company's worldwide law enforcement training programs and has been adopted by an increasing number of agencies and officers. It's become ASP's best-selling Every Day Carry light, and it's boasting some significant updates for 2019.

The slim, pen form-factored light is now almost 20% brighter than before, putting out a dazzling 220 lumens, powered by just two AAA batteries. And it's more versatile,

with the addition of ASP's "Double Tap" secondary setting—a quick, second tap of the tail cap switch drops the lumen output down to 15, for reading or other close-in work. Also new for 2019 is a Dual Fuel version of the light—the Scribe

DF—interchangeably powered by either the included rechargeable battery or two AAA single-use cells.

Color-coded for easy identification

» ASP has updated its popular Ultra Cuff restraint collection with color-coded Identifier models. With their highly-visible blue, gray, yellow or pink bands, the cuffs are perfect for—as the name suggests—identifying agency/officer equipment for asset control and property recovery purposes. They're also used by some agencies and corrections facilities to designate prisoner status (intake, medical, high-risk, etc.), some officers have even used them to designate subjects for reporting purposes; for example, the driver of a vehicle could be identified with blue cuffs, front passenger with gray, and rear passenger with yellow.

Ultra Cuffs are designed to provide the optimal combination of strength, precision, speed, security and lightweight. Their unique feature set includes forged alloy frames, dual-sided keyways, interchangeable/replaceable lock sets and more.

Available in chain, hinge or rigid styles, each with a variety of available lock set/pawl configurations.
