From ASP, the **SPECTRUM** is the company's first multi-beam color tactical flashlight. The Spectrum defaults to an ultra-bright white primary beam for safety, but also offers a choice of secondary light colors — red, green or blue. The Spectrum also features a strobe setting and has Dual Fuel ability to run on either the included rechargeable battery or a pair of CR123A disposable cells.

ASP introduces the **TRANSPORT PLUS**. The kit facilitates safe, efficient restraint of wrists and legs, while allowing adequate seated comfort and sufficient mobility for corrections transfers, court appearances and other transport scenarios. It includes wrist and ankle cuffs with a connecting chain and integrated, proprietary high-security locking system. Extra keys are included, and it's all in a compact, organized EVA molded storage case.

The **TALON INFINITY** pushbutton-release baton expands and collapses with unprecedented smoothness and ease, and its exclusive materials and construction result in a virtually maintenance-free design eliminating the need for routine lubrication. Infinity batons also carry a lifetime warranty and are available in over 20 variants.
