The 16340 lithium-ion battery inside the **SENTINEL E3** and **SENTINEL X E3** — ASP's first triple-fuel flashlights — recharges inside the light to provide a steady output of 400 lumens. The rechargeable battery can be swapped for a CR123A disposable cell or an AA battery (use of backup battery options results in decreased lumen output). Like all ASP lights, the Sentinel is designed for real-world simplicity: all light modes are accessible via a single tail switch. A half-press turns the light on in momentary mode, a full press enables constant-on mode. The "Double Tap" feature activates a low light setting on the Sentinel, or a strobe on the Sentinel X.
