

# Transport Kit

ASP Ultra Cuffs are the lightest and strongest forged frame police restraints in the industry. Rigid Ultra Cuffs restrict both linear and lateral movement. The two pawl Ultra Cuff Lock Set is extremely difficult to pick or shim. The restraints are part of an integrated system for increased transport security.

A Rigid high security Ultra Cuff forms the foundation of the ASP Transport Kit. The kit secures a subject by locking Rigid Handcuffs to a unique waist restraint. The system employs a high security custom lock that has 2,187 combinations. The proprietary design was developed by ASP.

A laminated cut resistant security belt is available for law enforcement or unruly airline passengers. A welded stainless steel waist chain is recommended for correctional activities. Rigid handcuffs are rapidly applied. The waist restraint is easily put in place. Cuffs remain on, even if the waist restraint is removed.

Whether for law enforcement, airline security or corrections, the ASP Transport Kit is a major advance in the safety and control of subjects during transit.
