

USB Accessories

Each ASP lighting product is part of a total lighting system. ASP illumination tools are complemented by cases, belt carriers and a tactical training program. USB Accessories are an integral part of the ASP Lighting System.

Each family of ASP lights (Every Day Carry, Duty, Strategic) has a rechargeable Lithium-ion component. All ASP rechargeables employ USB-C charge ports. USB-C is the world standard for cell phones. 18650 rechargeable lights also accept two CR123A Lithium primary cells. ASP calls this feature Dual Fuel Technology.

Interconnecting transport cases are available for 10900, CR123A, 18650, and 21700 batteries. Link® cases allow an officer to carry a variety of battery types or interconnect any quantity of a specific battery.

ASP USB Accessories are exclusive, innovative and practical. Each is designed for a specific purpose. Each enhances the performance and functionality of ASP illumination tools.

- Exclusive Designs
- Industrial Performance
- Cross Platform Compatibility
- Lithium Power Based
- USB-C Based

USB Accessories . . . Creating Brilliance

Micro Flex

A flexible USB-C extended connector with a protective keyring carrier.

CR123A Battery & Link Case

An interconnecting protective case for CR123A Lithium batteries.

Retractable C

A retractable USB-C connecting cord with reversible plugs.

10900 Battery & Link Case

An interconnecting case to protect 10900 rechargeable Lithium-ion power cells.

Charge Bank

A micro USB or 12v car outlet charger for 18650 power cells.

18650 Battery & Link Case

An interconnective carrier to protect 18650 rechargeable Lithium-ion power cells.

Charge Dock

A magnetic charger for 18650 power cells that attaches to any micro USB charge cord.

21700 Battery & Link Case

A protective case for transport of 21700 Lithium-ion power cells.
