

SABO Deadlift

BEST SELLER

Specialized shoes
for **deadlifting**

MAIN FEATURES

- New anatomical last was created especially for deadlifting
- New non-marking outsole is made of high density material with a special design for traction
- High cut upper and materials optimal for training

ADVANTAGES

- The soles are thin and flat to decrease pulling distance. A thin sole means the barbell is higher up from the floor relative to the athlete. This allows for more weight to be lifted since the pulling distance becomes shorter.
- Specialized footwear protects the feet from injuries related to heavy lifting. Protects athletes' feet from platypodia (flattening of the arches)
- This shoe provides maximum stability for the ankle
- The soles are made from materials that do not have any give which results in a good surface to push against. The pattern on the outsole minimizes slipping
