

To assemble this hand crafted console table you will need the following:

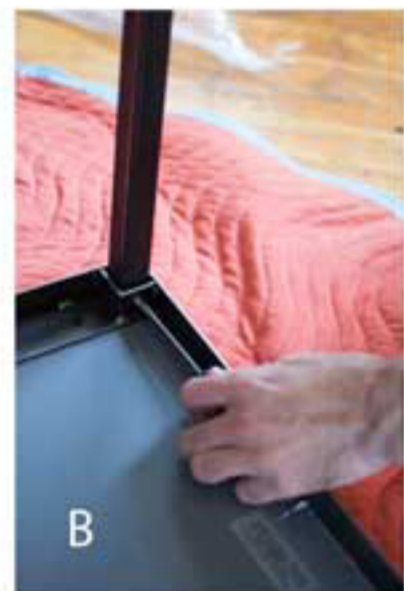

1. a flat head screw driver
2. soft/padded surface to lay the table top on.

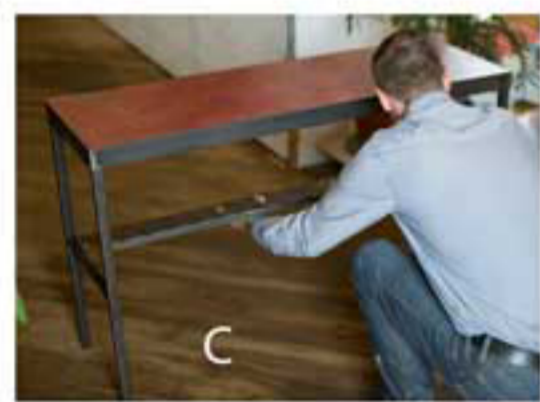

ASSEMBLY:

1. Unwrap the table legs (2 sets), steel shelf and the table top completely.
2. Lay the table top face down on a soft/padded surface to prevent scratches during assembly. You can also use the bubble wrap packing material.

3. Insert the table legs into the corners of the table top. (image A)
Make certain to insert the ends of the legs that **do not** have the black plastic inserts.

4. Using a flat head screw driver, tighten down the set screw in each corner tightly. (image B)
5. Repeat steps 3 and 4 for the other table leg set.
6. Stand table up without the lower steel slat shelf.

7. Drop steel shelf onto horizontal supports. You will need to insert shelf from the inside of the table legs. (image C)

8. Make certain that the small steel tab on each end of the shelf drops down on the outside edge of the horizontal bar. (images D and E)

9. Enjoy your new table!
