Check your printer to make sure that you have page settings to "Actual" ... the line below should be 10 cm or 4 inches long.

< Line above is 10 cm or 4 inches long >

Cut to the edge of the shadow if you need a slightly larger fit or are using a seam width of 1/2 inch or 125 mm. The seam width of 3/8 inch or 1 cm is built into the black thin line that outlines the pattern pieces.

To make a full brim pattern piece, cut out pages 1 and 2 twice and tape together the center front to create notch full v on full pattern brim piece. You do not need to cut an outside center notch on the brim piece but cutting one at the center on the inside edge is helpful when matching seams or notches when you join the top pieces to the brim.
