

Transparent & Translucent Series

Natural Wood Siding & Deck Finish

with advanced UV protection

The only thing we won't stain is the natural world around you

When you use Nature's Edge, you are applying the finest wood finish available to your home. At the same time, you put less stress on our world. Nature's Edge is the product of a relentlessly disciplined and passionate pursuit to create the world's finest waterborne finish. The result is an odorless stain with an incredibly low VOC level and a non-toxic impact on lawns, trees and plants. The finish is readily absorbed, easily applied, and far outlasts other stains that can't stand up to the rigors of UV and weather. Whether you are starting from scratch or applying a refreshing facelift, go with the finish that's the finest at beautifying and protecting wood.

The Nature's Edge Advantage:

- ✓ **Longevity:** Nature's Edge Wood Finish is optimized to deliver our penetrating natural long oil alkyd resin into the wood with non-polluting water as our solvent. The fact that our waterborne oil penetrates into the wood instead of forming a film on the surface is vital to both protection and longevity. When applied and maintained properly Nature's Edge will preserve and protect the beauty of wood from the assault of sunlight, wind and water. All exterior wood finishes require maintenance and none can be expected to last forever without it. While the interval between maintenance coats is highly dependent upon environmental conditions, we and many others strongly believe Nature's Edge wood finish is the preferred choice for long term wood protection.
- ✓ **Environmentally Friendly:** Nature's Edge Wood Finish avoids damage to the environment while significantly improving performance. Our natural alkyd resin is produced from renewable resources making this a truly green and environmentally responsible technology. With Nature's Edge you can be certain you have purchased a finish that naturally compliments and protects your wood, and by design avoids damage to the environment at large.
- ✓ **Low VOC:** Our renewable natural oil formula is optimized to provide wood penetration and performance at extraordinarily low levels of Volatile Organic Compounds (VOC). VOC's are pollutants emitted into the atmosphere principally from the high levels of solvents found in the conventional solvent borne and water based stains on the market today. At a VOC level of 95 grams/liter, Nature's Edge is among the greenest wood finishes available anywhere, far exceeding both the VOC regulations for today and well into the future.
- ✓ **Biocide Protection:** Advanced fungicide, mold and mildewcide inhibitors have been added to significantly reduce the likelihood that decay fungi, mildew and airborne spores will interfere with the lasting beauty of your home and your family's health.

✓ **Beautiful Look:** Our transparent series has been designed to bring out the natural highlights of wood by enhancing the grain, not concealing it. If you desire the deeper tones – be it as an accent or as the main envelope color – there is our translucent series. With the great number of standard and custom color options to choose from, whether you prefer a traditional or contemporary look, your home is sure to stand out from the rest.

✓ **Moisture Content:** A major benefit of our waterborne technology is that our finish can be applied to wood containing as much as 20% moisture content. This means you can apply our finish as a part of the building process and not have to wait months to finish and protect it.

✓ **Temperature Range:** Our wood finish products can be applied in temperatures ranging from 40° to 90° Fahrenheit. This wide temperature range significantly extends the application season, which could mean the difference between finishing your home on time and having to wait until the next season. It is very important to apply any wood finish within the manufacturer's recommended temperature range to prevent application issues that could cause the finish to fail prematurely.

✓ **Application and Clean up:** Nature's Edge Wood Finish can be applied with an airless sprayer, brush or roller. Clean up is simple, just rinse with soap and water. Store in a cool place, do not freeze.

Transparent Series					
<i>Café</i>	<i>Cedar</i>	<i>Natural</i>	<i>Woodlands</i>	<i>Walnut</i>	<i>Ghostwood</i>
