

FLUTES[®]
GOLD

LONG LIVE EARS.

"Music is constantly evolving. For over 50 years, the way we record, store and access that music has changed as much as the artists and songs themselves. But today's approach to speaker technology is as old as Louis Armstrong's 'What a Wonderful World'.

This is not the same. This is a new way of thinking, a way of thinking that is focused on delivering the purest sound with the smallest of interventions. In order to move forward we have gone back to the very beginning to understand how sound interacts on a molecular level. Welcome to Flares."

Davies Roberts
Flares inventor

LONG LIVE EARS.

**"These are the best earphones ever!
I mix on these! The detail, the clarity, and low end
are '*pinch me am I dreaming*' great."**

Tony Visconti

Grammy award winning producer
David Bowie, T-Rex, Morrissey, Iggy Pop

EARFOAMS® Technology

Acoustic Lens Technology
Focuses sound directly on to the ear drum and allows for an uninterrupted path when the tip is compressed.

Ultra-Soft Memory Foam
Ensures a comfortable fit allowing for extended listening sessions with the highest quality audio.

Inner Silicone Structure
A moulded silicone core grips FLARES® for a secure fit and is compatible with all T200 type earphones.

Size

Small Medium Large

○ ○ ○

The size selection is represented by three colored circles: a small green circle for 'Small', a medium orange circle for 'Medium', and a large red circle for 'Large'.

Audiophile

Focused on delivering the purest sound, our Audiophile Earfoams are specifically designed for transparency by using Acoustic Lens technology. This projects sound directly in to the ear canal resulting in extremely accurate delivery. When the tip is compressed inside the ear, the opening of the tip remains undisturbed creating a clear pathway for all your music.

Everyday

Flares Everyday Earfoams let you enjoy high quality audio without having to worry about replacing your Earfoams. Also built with Acoustic Lens technology, this silicone version is the ultimate in durability yet still provides an immersive audio experience.

Universal

Flares Universal Earfoams are made from a more durable, water-based memory foam and are shaped to fit the majority of ears. If comfort is the most important thing, then look no further.

These Earfoams can be found inside your Flares carry case.

Audiophile				Ultra-soft Memory Foam	
Everyday				Silicone	
Universal				Memory Foam	

1.2.3

Fitting Instructions

Push tip on to the neck and click into place

Leave no gap between the shoulder of the body and the base of the tip

Pinch and roll the end of the tip

Please Note:

In order to hear the full frequency range, there must be a complete seal in the ear canal. Fit small silicone tips initially to find your correct size; use larger sizes if the full frequency range is not achieved. Audiophile tips are extremely delicate and may tear if handled incorrectly.

4 . 5 . 6

**Fitting
Instructions**

**Pull top of ear up
and backwards
to open ear canal
and push tip deep
into ear**

**Hold in place
for 15 seconds
to create a
perfect seal**

**To replace the
tips, grip the
tip gently and
ease off the
body**

Cleaning and Storage:

To clean your tips, remove from the earphones, wipe with a damp cloth, then leave to dry. To clean your Flares, remove the tip, hold upside down (tip end pointing towards floor) and gently remove any wax or dust with a cotton bud. Flares are not waterproof; do not rinse or submerge in water or alcohol. Store the earphones in the carry case before and after use.
