Congratulations on bringing home your new appliance!

Don’t forget to register your product at homelabs.com/reg for updates, coupons, and other relevant information.

Although greatly appreciated, product registration is not required to activate any warranty.
IMPORTANT SAFETY INSTRUCTIONS

Before using your washing machine, please read this manual carefully before installation and keep it for future reference. This manual contains important information on the installation, use, and care of your appliance to prevent you from injury and property damage.

• Read all instructions before using the appliance.
• Use this appliance only for its intended purpose as described in this manual.
• Do not use natural hand-washing soap in the washer.
• Always check the inside of the washer for objects before loading laundry.
• Open the faucet and check if the water supply hose connector is firmly tightened and that there is no water leaking after a water supply failure or when reconnecting the water supply hose.
• Do not stand on top of the appliance or place objects (such as laundry, lighted candles, lighted cigarettes, dishes, metal objects, etc.) on the appliance.
• Do not turn the appliance off by unplugging the power plug while the washer is in operation.
• Do not attempt to repair, disassemble, or modify the appliance yourself. Do not use any fuse (such as cooper, steel wire, etc.) other than the standard fuse.
• Do not attempt to repair the appliance if it is damaged, malfunctioning, partially disassembled, or has missing or broken parts, including a damaged cord or plug.
• Do not touch the power plug with wet hands.
• Do not force the washer lid open while the washer is operating.
• Do not attempt to operate this appliance if it is damaged, malfunctioning, partially disassembled, or has missing or broken parts, including a damaged cord or plug.
• Do not turn the power plug off by unplugging the power plug while the washer is in operation.
• Do not attempt to repair, disassemble, or modify the appliance yourself. Do not use any fuse (such as cooper, steel wire, etc.) other than the standard fuse.

To reduce the risk of injury to persons, adhere to all industry recommended safety clauses.

Always follow the fabric care instructions supplied by the garment manufacturer.

Position the appliance so that the power plug is easily accessible.

Do not reach into the washer while the laundry tub is rotating. Before loading, unloading, or adding items, press the START/PAUSE button and allow the laundry tub to a complete stop before reaching inside.

Do not mix chlorine bleach with ammonia or acids such as vinegar.

Ensure that the water, voltage, frequency, and current match the product specifications. If in doubt, have this appliance installed by a qualified technician or service company.

Save these instructions for future use. For Indoor Use Only.
UNPACKING AND REMOVING SHIPPING MATERIAL

Remove the packing box and lift the washer up and away from the foam base cushion. Open the lid of washer to take out all accessories including protection foam.

Parts Description
- Top lid
- Control panel
- Frame
- Cabinet
- Adjustable leg
- Water inlet
- Power line
- Drain hose
- Roller Pump filter
- Water supply hoses
- Quick connection adaptor
- Bottom cover
- Screw
- Phillips screwdriver
- Pliers
- Straps
- Owner's manual

ACCESSORIES

Tools Needed in Installation
- Level
- Pliers
- Phillip screwdriver

Key Dimensions and Specifications
- 17.7 in. 450mm
- 31.5 in. 800mm
- 41.3 in. 1050mm
- min 1 in. 25mm
- min 1 in. 25mm

CHOOSE THE PROPER LOCATION

IMPORTANT:
Make sure to follow the electrical and grounding requirements and warning in Important Safety Instructions.

Floor
For best performance, you must install your washer on a solidly constructed floor. Wood floors may need to be reinforced to minimize vibration. Carpeting and soft tile surfaces are contributing factors to vibration which can cause your washer to move slightly during the spin cycle.

WARNING:
Do not install your washer in areas where water may freeze, since your washer will always retain some water in its water valve, pump, and hose areas. Frozen water can damage the belts, the pumps, hoses, and other components. Therefore, make sure your washer is installed in an area where temperatures remain above freezing.

INSTALLATION INSTRUCTIONS
INSTALLATION INSTRUCTIONS

Water

To correctly fill your washer in the proper amount of time, water pressure of 14 to 70psi (100 to 500 kPa) is required. Water pressure less than 14psi may cause water valve failure, or may extend the fill time beyond what your washer controls allow, causing your washer to turn off and alarm error. A time limit is built into the controls to prevent flooding in your home if a hose becomes loose.

The washer faucet must be within 4 feet of the back of your washer to match the inlet hoses provided with your washer. To avoid the possibility of water damage:
- Locate the washer so that the water faucet can be accessed easily.
- Turn off the faucet when the washer is not in use.
- Periodically check and ensure that there is no leakage from the water inlet hose fittings.

Drain facility

The recommended height of the stand pipe is 35 inch. The drain hose must be routed through the drain hose clip to the stand pipe. The stand pipe must be large enough to match the outside diameter of the drain hose.

INSTALL YOUR WASHER

WARNING: Before installing, make sure there are rubber gaskets inside the fittings at both ends of the water supply hoses. If there are no water inlet hoses packed with the washer or if the hoses are damaged, Call Home Service Center at 1-(800)-898-3002. Installing the water supply hoses without rubber gaskets can cause water leakage. When it's the first time you install the washer, be sure to use new hoses. If a hose is too short, replace the hose with a longer, high pressure hose.

Step 1: Move your washer to the selected location

Move the unit to a location as described in the previous sections. Tilt the washer back onto its rear rollers and push it forward as shown in the figure below. Move the unit to a location as described in the previous sections.

WARNING: Make sure the location has a hard, level surface without carpeting. There should be no direct sunlight. Do not expose the washer to freezing temperatures (under 32°F).

Front of the washer

Back of the washer

60~70°

Step 2: Install the Bottom Cover

Slide the bottom cover into the slots on bottom surface of the unit as in the following figure, and fix it with one screw attached with the washer.

Step 3: Connect the water hose

1. The Quick Connection Adaptor is primarily for quick connection to a single faucet, such as a typical kitchen sink. In cases where the washer is stored in a different place than where it is used, skip this step if you are connecting the washer to a sink with separate hot and cold faucets. The adaptor consists of two parts that quickly connect or disconnect. One part, the faucet fitting, is for connection to the faucet and the other part, the hose fitting, connects to the cold water hose of the washer.
   - Pull back on the white ring to free the faucet fitting from the adaptor for installation into the faucet.
   - Screw the end of the cold water hose onto the base of the hose fitting.
   - If the faucet has internal screw threads, unscrew the aerator if present from the tip of the faucet. Then screw the faucet fitting into the faucet. Make sure that the black rubber gasket is on the top of the adaptor before screwing it in.
   - If the faucet has external screw threads, remove the gasket from the top of the faucet fitting, and screw the fitting over the external threads.
   - Pull back on the white ring to connect the two parts of the adaptor back together.

NOTE: When connected to a single faucet, be sure to run cold water only.

2. Connect the ends of the water supply hoses to the faucets. For convenience, use the Quick Connection Adaptor for connection to the cold water faucet. See instructions for Quick Connection Adaptor use in previous sections.

3. Tighten the fittings by hand until they are snug, and then tighten them an additional two-thirds of a turn with a wrench.

WARNING: When you fasten the fittings, do not fasten them too tightly or apply tape or seal to the faucets or water supply intakes. This can damage the fittings. After you have connected the water supply hoses to the faucet, ensure that they are connected securely by pulling the water supply hoses downwards.

4. Place the unconnected ends of the hoses into a bucket and open the faucets connected to the two water supply hoses for 10 or 15 seconds to remove any substances from the hoses. Close the faucets before continuing.

5. Connect the ends of the water supply to the water supply intake connections at the top of the washer.

WARNING: The water hose connected to the COLD faucet must be connected to the cold water supply intake.

6. Tighten the fittings by hand until they are snug, and then tighten them an additional two-thirds of a turn with a wrench.

WARNING: Ensure that the water supply hoses are not twisted or bent. If the hoses are twisted or bent, the hoses can leak and cause electric shock due to the water leakage. To ensure the correct water usage, connect to the COLD water faucet.

7. Turn on the COLD water supplies and check all the water supply intake connections and the faucets for water leaks.

Step 4: Connect the drain hose

Position the other end of the drain hose. It can be positioned in three ways.

A. Over the edge of a wash basin

Secure the guide to the side of the basin wall with a hook or to the tap with a piece of string to prevent the drain hose from moving.

B. In a stand pipe

The stand pipe must be no shorter than 32 inch and no longer than 39 inch.

C. In a laundry tub

The laundry tub must be no shorter than 32 inch and no higher than 39 inch.

IMPORTANT: Lower drain hose will lead to water leakage and no washing function.

10 11
Step 5: Level your washer
See if the washer is leveled by checking the position of the tub or using a leveling gauge.
1. Slide the washer into position.
2. Open the lid of the washer, and pour the water into the tub to just below the pulsator level.
3. If the washer is leveled, the pulsator is positioned at the center of the washer as shown in the figure. If not, level your washer by turning the front leveling feet clockwise or counterclockwise as necessary.

NOTE: There is ONLY ONE adjustable leg on this washer.

Step 6: Power on your washer
Plug the power cord into a 3-prong, well grounded 120V 60Hz approved electrical outlet protected by a 15-amp fuse or comparable circuit breaker. Your washer is grounded through the third prong of the power cord when plugged into a 3-prong grounded electrical outlet.

Step 7: Run a test cycle
Run a test cycle as follows to check if your washer is properly installed.
1. Load about 3.5 pounds of laundry into the tub.
2. Press the ON/OFF button to turn on your washer.
3. Select the Rinse+Spin cycle.
4. Press the Start/Pause button to start the test cycle.
5. The washer should not rock or vibrate excessively when water is supplied, washing or spinning, and should drain well during the spin cycle.

WARNING: If there is a water leak while filling or draining, check the water connections.
If the washer rocks and vibrates excessively, level your washer again.

Step 8: Store your washer
If you want to store your washer in another location, unplug it, drain any remaining water from the drain pipe and hook the pipe onto the back of the washer. Disconnect the water inlet hoses from the faucets and move the washer to a new location.

OPERATION

Control Panel

1. Program
   - Press this button to select your desired washing program: Heavy (light), Gentle (light), Normal (light), Rapid (light) and Soak (light).
2. Load Size
   - Press this button to set your washing load size. Your setting will decide the water level throughout all steps.
3. Wash
   - Press the button to select the washing time.
4. Digital display
   - The digital display will show and count down the estimated minutes for the wash cycle selected.
5. Rinse
   - Press the button to select the times of rinse.
6. Spin
   - Press the button to select the time of spin.
7. START/PAUSE
   - Press the START/PAUSE button once to start the wash cycle. Press the button during operation to pause the cycle. Press again to continue the cycle.
8. ON/OFF
   - Press the button once to turn ON the power. Press again to turn OFF. Washing a load of laundry.

Step 1: Power on your washer
Press the ON/OFF button to power on.

Step 2: Load your washer
WARNING:
Before loading your laundry, be sure to take out coins, keys and other hard objects, and close all zippers to prevent the clothes from damage.
Sort laundry by fabric type, soil level, color and load size as needed. Refer to the Fabric Care Chart. Fill the tub with dry, unfolded clothes, but DO NOT OVERLOAD the tub. Load the tub no more than 3/4 full.
To ensure good cleaning results do not overload the tub, especially when washing heavily soiled loads.

WARNING: Overloading may reduce washing efficiency, cause excess wear, and possibly cause creasing or wrinkling of items in the load.

Note: To add a forgotten item:
1. Press the START/PAUSE button to pause the washer.
2. Wait for the tub to stop running. Then open the lid.
3. Add the items, close the lid, and then press the START/PAUSE button. The cycle will resume.

Step 3: Add detergent
This washer is designed for high efficiency (HE) powder detergent only. Add the recommended amount of detergent directly into the tub before starting your washer. The normal amount of detergent to use is 1/4 to 1/2 of the maximum amount recommended by the detergent manufacturer. Always reduce the amount of detergent if the load is small or light, or if your water is very soft. Never use more than the maximum amount recommended by the detergent manufacturer.

WARNING: Never pour any liquid bleach directly onto the load. It can cause fabric damage, such as weakening of cloth fibers or color loss.

Step 4: Select your desired cycle and options
1. Select your desired washing program.
2. Select the water level based on a High, Medium or Low.
3. Select any combination among WASH, RINSE and SPIN modes according to the dirty degree.
   - Refer to the detailed operation methods as following:
   - Continuously press the washing button to select washing time.(1~15 minutes, or no wash process)
   - Continuously press the rinse button to select rinse times.(1~3 times, or no rinse process)
   - Continuously press the spin button to select the spin time.(1~9 minutes or no spin process)

Step 5: Start the cycle
Press the START/PAUSE button to start the washing cycle. When the washing cycle begins, the Estimated Time in minutes for the cycle to complete will show and count down in the digital display.

WARNING: When the washer is running, you should pause the program and wait for it to stop completely before you open the lid.
CLEANING AND MAINTENANCE

Turn off the water faucets after washing is completed. This will shut off the water supply to your washer and prevent the possibility of damage from leaking water.

Leave the lid open to allow the inside of your washer to dry out.

Use a soft cloth to wipe up all detergent, bleach or other pills as they occur.

Control Panel: Clean with a soft, damp cloth. Do not use abrasive powders or pads. Do not spray cleaners directly onto the panel.

Interior of your washer: Clean periodically to remove any dirt, soil, odor, mold, mildew, or bacterial residue that may remain in your washer as a result of washing clothes. Use cleaners labeled “Washer safe”.

Lint filter: There is a built-in Lint filter in your washer. It can help to collect lint during washing cycle. Take it out and clean the filter with water. Then place it back into the washer. It is suggested to clean the lint filter every 10 cycles. Take it out and clean the filter with water. Then place it back into the washer.

Pump filter: There is a built-in Pump filter in your washer. It can help to protect the pump during washing cycle. Take it out and clean the filter with water. Then place it back into the washer. It is suggested to clean the Pump filter once every month. Take it out and clean the filter with water. Then place it back into the washer.

It is suggested to clean the Lint filter every 10 cycles. Take it out and clean the filter with water. Then place it back into the washer. It is suggested to clean the Pump filter once every month. Take it out and clean the filter with water. Then place it back into the washer.

POSSIBLE CAUSES

Washer will not turn ON

The power cord is not properly plugged in.

The fuse is blown, circuit breaker has tripped, or power outage has occurred. House fuse is blown or circuit breaker has tripped, due to multiple appliances on one outlet.

Washer will not operate

Water supply is turned off.

Control panel has powered off due to inactivity.

Washer is unplugged. Controls are not set properly.

Lid is open. Circuit breaker/fuse is tripped/blown. Control needs to be reset.

START/PAUSE was not pressed after a cycle was set. Extremely low water pressure.

Washer is too cold. Washer is running under Delay start program.

Washer will not drain water

Kinked drain hose. Drain hose is located higher than 48 in. above the floor.

TROUBLESHOOTING

Your washing machine is equipped with an automatic error-monitoring system to detect and diagnose problems at an early stage. If your washer does not function properly or does not function at all, check the following before you call for service.

<table>
<thead>
<tr>
<th>PROBLEM</th>
<th>POSSIBLE CAUSES</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Washer will not turn ON</td>
<td>The power cord is not properly plugged in. The fuse is blown, circuit breaker has tripped, or power outage has occurred. House fuse is blown or circuit breaker has tripped, due to multiple appliances on one outlet.</td>
<td>Make sure that the plug is plugged securely into a grounded,3-prong, 120V/60-Hz outlet. Reset circuit breaker or replace fuse. Do not increase fuse capacity. If the problem is a circuit overload, have it corrected by a qualified electrician. Reset circuit breaker or replace fuse. If more than one appliance is connected to the outlet, call an electrician to have an additional circuit installed.</td>
</tr>
<tr>
<td>Water leaks</td>
<td>Over sudsing of detergent.</td>
<td>Over sudsing may create leaks. This might be caused by the type and amount of detergent. High-Efficiency detergent is the only detergent recommended. Make sure that detergent and any additives are put into the correct dispenser compartments. The normal amount of detergent to use is 1/4 to 1/2 of the maximum amount recommended by the detergent manufacturer. Always reduce the amount of detergent if the load is small or lightly soiled, or if your water is very soft. Never use more than the maximum amount recommended by the detergent manufacturer.</td>
</tr>
<tr>
<td>Thumping sound</td>
<td>Heavy wash loads may produce a thumping sound. Washer load may be out of balance.</td>
<td>This is normal. If the issue continues, the washer is probably out of balance. Stop/pause the operation and redistribute wash load.</td>
</tr>
<tr>
<td>Vibrating noise</td>
<td>Packaging materials were not removed. Wash load may be unevenly distributed in the tub. Not all leveling feet are resting firmly and evenly on the floor. Floor not rigid enough.</td>
<td>See Unpacking and Removing Shipping Material in the Installation Instructions. Pause the cycle and redistribute the load. See Level your washer in the Installation Instructions. Make sure that the floor is solid and does not flex.</td>
</tr>
<tr>
<td>Washer will not operate</td>
<td>Water supply is turned off. Control panel has powered off due to inactivity. Washer is unplugged. Controls are not set properly. Lid is open. Circuit breaker/fuse is tripped/blown. Control needs to be reset.</td>
<td>This is normal. Press the ON/OFF button to turn the washer on. Make sure cord is plugged securely into a working outlet. Turn both hot and cold faucets fully on. Make sure the cycle was set correctly. Close the lid and press the START/PAUSE button. The washer will not operate if the lid is open. Close the lid and make sure that nothing is caught under the lid preventing it from closing completely. Check house circuit breakers/fuses. Replace fuses or reset the breaker. The washer should be on a dedicated branch circuit. The washer will resume the cycle where it stopped once power is restored. Press the ON/OFF button, then re-select the desired cycle and press the START/PAUSE button. Press the ON/OFF button then re-select the desired cycle and press the START/PAUSE button. The washer will shut off if the START/PAUSE button is not pressed within ten minutes. Check another faucet in the house to make sure that household water pressure is adequate. Allow it to warm up before pressing the ON/OFF button. Otherwise, the display will not come on. It’s normal if the unit doesn’t operate under Delay start function. It will start automatically after the delay time is out.</td>
</tr>
<tr>
<td>Washer will not drain water</td>
<td>Kinked drain hose. Drain hose is located higher than 48 in. above the floor.</td>
<td>Ensure that the drain hose is not kinked. Make sure that the drain hose is no higher than 4 ft. above the bottom of the washer and is no more than 5 ft. away from the washer.</td>
</tr>
</tbody>
</table>
POSSIBLE CAUSES

- Rattling and clanking noise: There might be objects, such as keys, coins, or safety pins, in the tub or pump.
- Staining: Washer was not unloaded promptly. Clothes were not properly sorted.
- Wash cycle time is longer than usual: The washer automatically adjusts the wash time for the amount of laundry, water pressure and other operating conditions.
- Musty or mildewy odor in the washer: Incorrect or too much detergent has been used. Inside of tub was not cleaned properly.
- Washer will not fill properly: Filter clogged. Inlet hoses may be kinked.
- Water leaks every load: Hoses are not installed correctly.

SOLUTION

- Stop the washer. Check the tub and drain filter for foreign objects. If noise continues after the washer is restarted, call the service center for help.
- Always remove items from the washer as soon as possible after the cycle is completed. Always wash dark colored clothes separately from light colors and whites to prevent discoloration. Never wash heavily soiled items in the washer.
- This is normal. The time remaining shown in the display is only an estimate. Actual time may vary.
- Use only High-Efficiency (HE) detergent in accordance with the manufacturer’s instructions. Run an Express cycle with bleach once a month to clean tub and remove any mold from inside washer. Disassemble the water inlet hose and clean the inlet point. Check that inlet hoses are not kinked or clogged.
- Make sure that both hot and cold water faucets are turned on all the way. The washer lid is open. Hot and cold inlet hoses are reversed.
- Water level is too low. Water inlet valve damaged.
- Check all filling and draining hose connections to ensure that they are tight and secure.

ERROR CODES

- E1: It takes over 30 minutes to fill water but cannot achieve its preset water level.
- E2: The top lid is open.
- E3: The washer runs out of balance for three times.
- E4: It takes over 10 minutes to drain but cannot drain the washer completely.
- E5: Water has exceeded its preset level.

SOLUTION

- Check for Washer not filling properly and Water leakage.
- Close the lid completely.
- Redistribute the laundry load in the tub.
- Check 'Washer will not drain water' in troubleshooting section.
- Call the service center for help.

FABRIC CARE CHART

The following symbols provide garment care direction. The clothing care labels include symbols for washing, bleaching, drying and ironing, or dry cleaning when necessary. The use of symbols ensures consistency among garment manufacturers of domestic and imported items. Follow care label directions to maximize garment life and reduce laundering problems.

The number of dots represent appropriate wash water temperatures for various items. The temperature range for Hot is 105°-125°F/41°-52°C, for Warm 85°-105°F/29°-41°C and for Cold 60°-85°F/16°-29°C. (Water temperature must be at least 60°F/16°C for detergent activation and effective cleaning.)
hOme™ offers a limited two-year warranty ("warranty period") on all of our products purchased new and unused from hOme Technologies, LLC or an authorized reseller, with an original proof of purchase and where a defect has arisen, wholly or substantially, as a result of faulty manufacture, parts or workmanship during the warranty period. The warranty does not apply where damage is caused by other factors, including but without limitation: (a) normal wear and tear; (b) abuse, mishandling, accident, or failure to follow operating instructions; (c) exposure to liquid or infiltration of foreign particles; (d) servicing or modifications of the product other than by hOme™; (e) commercial or non-indoor use.

The hOme™ warranty covers all costs related to restoring the proven defective product through repair or replacement of any defective part and necessary labor so that it conforms to its original specifications. A replacement product may be provided instead of repairing a defective product. hOme™’s exclusive obligation under this warranty is limited to such repair or replacement.

A receipt indicating the purchase date is required for any claim, so please keep all receipts in a safe place. We recommend that you register your product on our website, homelabs.com/reg. Although greatly appreciated, the product registration is not required to activate any warranty and product registration does not eliminate the need for the original proof of purchase.

The warranty becomes void if attempts at repair are made by non-authorized third parties and/or if spare parts, other than those provided by hOme™, are used.

You may also arrange for service after the warranty expires at an additional cost.

These are our general terms for warranty service, but we always urge our customers to reach out to us with any issue, regardless of warranty terms. If you have an issue with a hOme™ product, please contact us at 1-800-898-3002, and we will do our best to resolve it for you.

This warranty gives you specific legal rights and you may have other legal rights, which vary from state to state, country to country, or province to province. The customer may assert any such rights at their sole discretion.
