- Columbus
- Veniz
- Qube Models
- Column Models
- Orlando
- Valetta Models
- Keops
- Lisboa
- Design Table
- Fuego Boxes

# RAL CLASSIC

The RAL Classic Palette consists of 194 color choices, offered in 9 tonal ranges. The majority of Bio-Blaze® products may be requested in any color represented within the RAL Classic Collection. Finishes are powder coated, a finish technique that is applied electrostatically and then cured under heat to form a “skin”. It creates a harder finish than conventional paint, increasing durability and making it idyllic for fireplaces.

Bio-Blaze®. *Fire your way.*

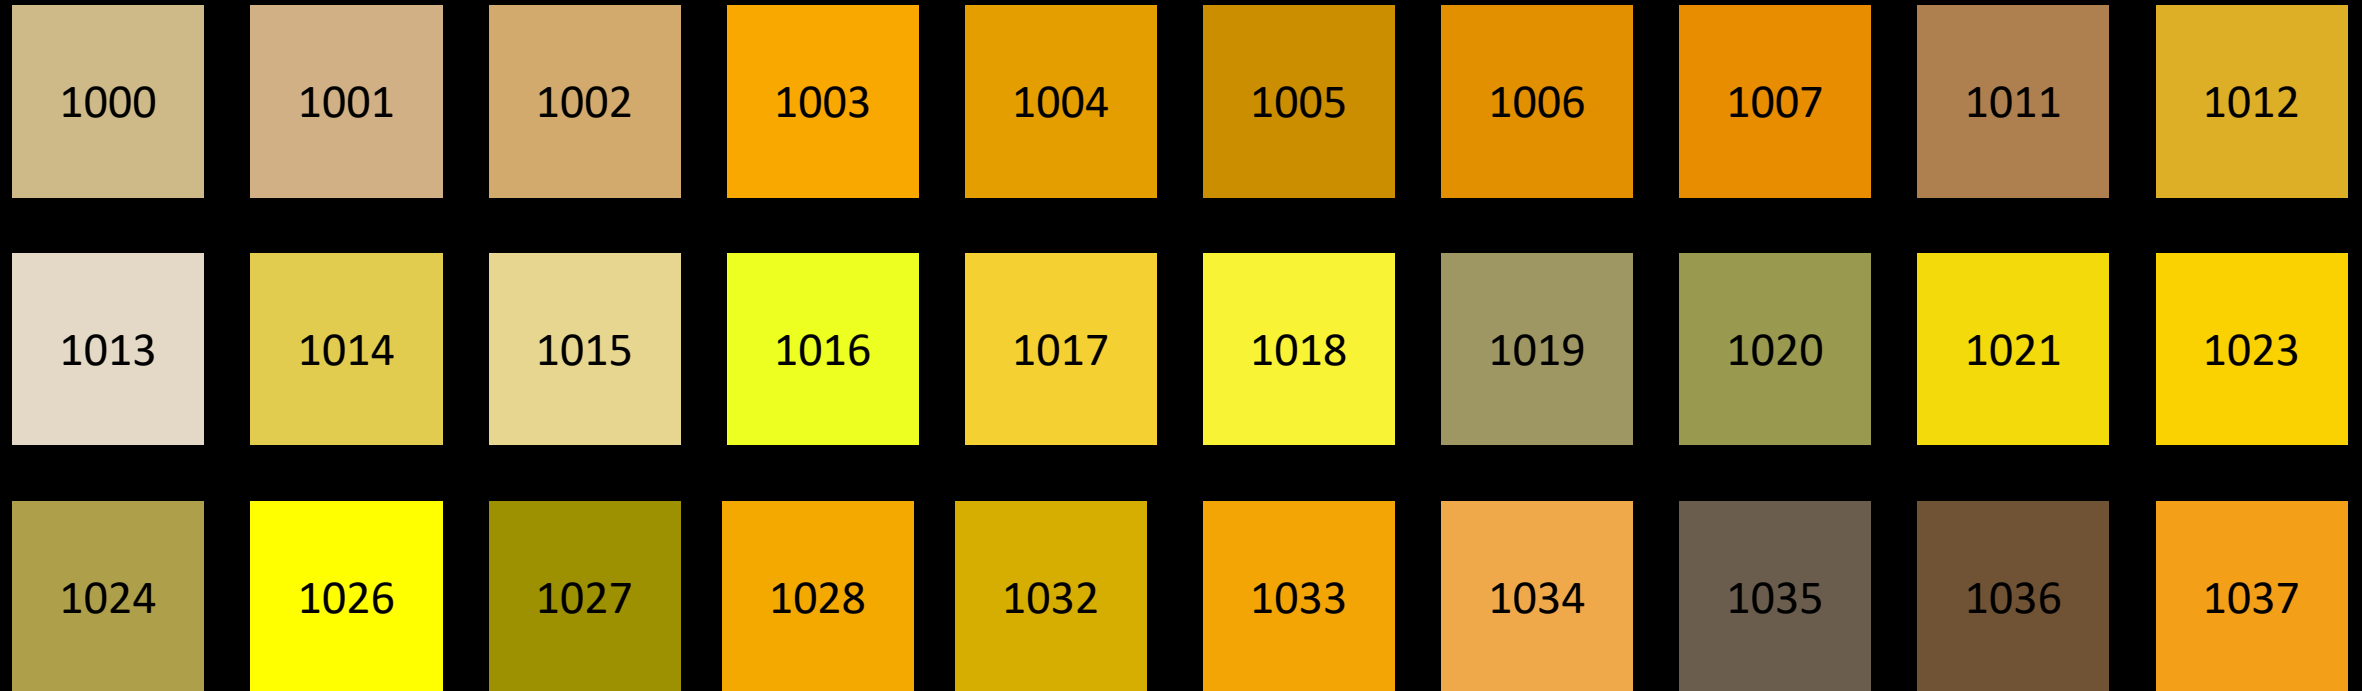

**RED** is not just a color  
it's an **attitude.**

Bio-Blaze®

# DISCLAIMER

The RAL colors which you see contained in this digital guide, **don't match the real RAL colors exactly in most cases**. Almost all **computer monitors don't provide accurate color reproduction**. Therefore, making a decision solely on the appearance of the color on a computer screen has inherent risk.

There are a number of reasons why computer monitors don't fully display RAL colors accurately:

1. Because the display quality of a monitor drops over time, the colors will always look different on various computer screens.
2. The majority of computer monitors can't display the most saturated RAL colors. That's why some of the RAL colors on computer screens look even less like the original.
3. On many monitors the same color looks very different from one angle to another. This color change is much less apparent on high-quality IPS display panels.

**To be sure of the correct color choice, we recommend requesting a sample chip before ordering.**
