WARNING! Failure to read and strictly comply with the steps contained within these instructions may result in serious injury or death.

WARNING! The safe use and operation of this product is the sole responsibility of the user. It is also the sole responsibility of the owner to provide any person(s) who borrow or purchase this product with this instruction manual. Failure to follow these instructions may result in serious injury or death. Additionally, failure to follow these instructions may subject you to personal liability penalties as determined by the U.S. Judicial system.

WARNING! Do not remove, modify and/or omit any portion or otherwise mechanically modify this product(s) or its assemblies in any manner. Modification, misuse and/or part substitution shall immediately void your factory warranty and may result in serious injury or death. If you suspect that a part(s) is missing and/or defective, immediately discontinue all use of the product and contact Redneck Manufacturing at 877-523-9986 for replacement of missing or defective parts. Always use genuine factory authorized replacement parts. Use of any replacement parts other than genuine parts voids your warranty and may result in serious injury or death.

WARNING! Contacting buried utilities may result in serious injury or death! Before digging always contact your local One-Call system to prevent personal injury, interruption of services, environmental accidents or job delays. Electric lines can shock or electrocute. Gas lines can rupture causing explosion or fire. Laser light in fiber optic cable can cause blindness. One-Call will notify participating utility companies of your proposed project. If you do not know the number for the local One-Call, call the National One-Call at 1-888-258-0808 for this information.

WARNING! Thoroughly inspect this or any other Redneck Manufacturing product(s) prior to each use for signs of wear, rot, corrosion, cracks, deterioration and/or any other type of defect. Immediately discontinue all use of this product or any other product(s) if they show evidence of wear, rot, corrosion, cracks, deterioration and/or any other type of defect. Failure to follow these instructions may result in serious injury or death.

Should you have any questions about the assembly, installation or use of this product, or any other Redneck Manufacturing product, please call one of our customer service representatives toll free at 877-523-9986.

STEP 1: Remove all parts from the packaging and familiarize yourself with all the parts and tools required. Find the bill of material on page 8 and verify that all parts and hardware are present.

Note: The typical hardware connection will use (1) 3/8" x 1-1/4" hex bolt, (2) flat washers, (1) lock washer, and (1) 3/8" hex nut. Refer to Figure 1.1 for assembly.

![Diagram of assembly hardware](image)

**Figure 1.1**

READ THESE INSTRUCTIONS IN ENTIRETY PRIOR TO ASSEMBLING THIS PRODUCT
STEP 2: Locate the base platform "A". Install (2) Porch Hand Rails "M" onto the base platform as shown in Figure 2.1 using the typical hardware connection in (8) places. If assembling stand in the 5' configuration skip to step 15.

**Figure 2.1**

STEP 3: Position your Redneck Hunting Blind on the Base Platform. Center the blind so that the door side is parallel with the porch.

NOTE: Make sure the blind is not resting on the tasseled portion of the front channel. Install the (4) 3/8" x 2" bolts, (4) 3/8" x 1-3/4" washers from inside the blind. Secure to the base platform with (4) 3/8" flat washers, (4) 3/8" lock washers, (4) 3/8" hex nuts as shown in Figure 3.1. DO NOT OVER TIGHTEN.

If assembling the 15' stand stop here and read the instructions included with the 5' Extension Kit.

Note: If installing a 6x6 Buck Palace Blind, install the 6x6 front braces, while attaching the blind to the frame. Check the inside of the blind for the Braces and Instructions.

**Figure 3.1**

STEP 4: Locate (4) Upper Leg sections “B”. The Upper Legs have 11 holes each. Install Upper Leg sections using the typical hardware connection in (16) places. Hand tighten all nuts and bolts until told to tighten. This will ensure proper alignment during assembly. Locate (4) Lower Leg sections “C” and (4) Leg Feet “H”.

The Lower Legs have 8 holes each. Attach feet to legs as shown in Figure 4.3 with the typical hardware connection in (8) places. Next, install (4) Lower Leg sections “C” to the Upper Leg sections “B” as shown in Figure 4.1 using the typical hardware connection in (4) places.

NOTE: Only install the bolts for the Lower Leg section into the bottom holes of the leg section joint (Figure 4.2). The top holes will be used in the next step.

**Figure 4.1**
**Figure 4.3**

**STEP 5:** Locate (4) Middle Perimeter Angles "D". Align according to Figure 5.1 and fasten them at the upper bolt hole of the leg section joint using the typical hardware connection in (8) places.

**STEP 6:** Locate (4) Lower Perimeter Angles "E". Align and fasten them to the Lower Leg according to Figure 5.1 using the typical hardware connection in (8) places.

**Figure 5.1**

**STEP 7:** Locate (8) Cross Braces "F". Using the typical hardware connection in (4) places, align and fasten the hole end of the cross brace to the hole in the upper leg as shown in Figure 7.1. Fit the brace on the inside of the Upper Leg angle. Next, remove the hand tightened bolt from the Lower Leg and Lower Perimeter angle connection. Align and fasten the hole end of the Cross Brace to the hole on the inside of the Lower Leg angle fasten and reinstall the typical hardware connection. Align the slot ends of the two Cross Braces with the hole in the Middle Perimeter angle as shown in Figure 7.2 and fasten with the typical hardware connection in (4) places.

**Figure 7.1**

**Figure 7.2**

Page 3
STEP 8: Tighten all bolts. Make sure to tighten every bolt.

STEP 9: Locate stand so that it is level and stable. Leveling of stand may require removal of dirt from under the feet of the stand.

STEP 10: Anchor stand according to the Tie Down Anchor Instructions on page 7.

STEP 11: Assemble ladder parts G, I, J, K, and L using the typical hardware connection in (12) places. Use (2) 3/8” x 2” hex bolt, (4) flat washers, (2) lock washers, and (2) 3/8” hex nuts to attach the ladder hand rail to the ladder. Refer to Figure 11.1 for proper assembly. Note on part I, the notched side will be facing up, or away from the stand when assembled.

STEP 12: Raise the ladder into position on the front of the platform. Move ladder so that notches in Ladder Connector rest firmly in the slots on the platform as shown in Figure 12.1. The Ladder Connector will sit flush with the surface of the platform.

STEP 13: Install (2) Snapper Pins into Ladder Connectors as shown in Figure 13.1 and secure pins.

STEP 14: Verify that all bolts are tight and securely installed.

STEP 15: Tighten and install the (2) supplied Ladder Stabilizers, part AD, until platform and ladder are securely tightened together; removing any slack/movement in the ladder.

The assembly of the 10' stand is now complete.
Assembling the stand in a 5' configuration

**STEP 15**: Locate (4) Upper Leg sections "B" and (4) Leg Feet "H" and assemble as shown in Figure 4.2 with the typical hardware connection in (8) places. Install Upper Leg sections on the Base Platform using the typical hardware connection in (16) places. Hand tighten all nuts and bolts until told to fully tighten. This will ensure proper alignment during assembly.

**STEP 16**: Locate (4) Middle Perimeter angles "D". Align and fasten the angle at the upper bolt hole of the leg as shown in Figure 16.2 using the typical hardware connection in (8) places.

**STEP 17**: Locate (4) Cross Braces "F". Using the typical hardware connection in (4) places, align and fasten the hole end of the cross brace to the hole in the upper leg. Align the slot end of the Cross Brace with the hole in the Middle Perimeter angle as shown in Figure 17.1 and fasten with the typical hardware connection.
STEP 18: Locate stand so that it is level and stable. Leveling of stand may require removal of dirt from under the feet of the stand.

STEP 19: Anchor stand according to the Tie Down Anchor Instructions on page 7.

STEP 20: Assemble ladder parts G, J, K, and L using the typical hardware connection in (5) places. Use (2) 3/8" x 2" hex bolt, (4) flat washers, (2) lock washers, and (2) 3/8" hex nuts to attach the Ladder Hand Rail to the Ladder Section. Hand Rail can be attached to either side of the ladder. Refer to Figure 20.1 for proper assembly.

Figure 20.1

STEP 21: Raise the ladder into position on the front of the platform. Move ladder so that notch in Ladder Connector rests in the slots on the platform as shown in Figure 12.1. The Ladder Connector will sit flush with the surface of the platform.

STEP 22: Install (2) Snapper Pins into Ladder Connectors as shown in Figure 13.1 and secure pins.

STEP 23: Verify that all bolts are tight and securely installed.

The assembly of the 5' stand is now complete.
Tie Down Anchor Instructions

WARNING! Never attempt to hunt from an unlevel stand. If you find that your stand is unlevel, canted, angled, unstable, or in any configuration other than level, immediately discontinue all use of this product. Readjust your stand as necessary to make it level and stable. Failure to follow these instructions may result in serious injury or death.

STEP 1: Secure stand to ground with (4) leg stakes. Drive each stake at an angle other than perpendicular to the ground. The angle allows the stake to better hold into the soil. Drive stake until head of stake rests on stand foot.

STEP 2: Begin your tie down anchor installation by locating the spot on the ground immediately below the tie down hooking point on the bottom side of your base platform. You can do this with the use of a piece of string and a weighted object tied to the end of the string.

STEP 3: If you are placing your stand over un-disturbed soil, the ground auger can be twisted into the ground. Turn auger until the top of the anchor is all that is extending above the ground. (it will make the auger easier to twist into the ground if all grass and vegetation is removed before installation) Skip to STEP 8.

STEP 4: If you are placing your stand over lose soil or conditions that may not hold the auger, please proceed with installing the auger in concrete as shown in STEP 5 – STEP 7.

STEP 5: Once the spot is located, dig a hole 12” in diameter by 30” deep. Dig the hole so that the bottom of the hole is approximately 20” in diameter.

STEP 6: Place ground auger into hole so that the bracket end of the anchor protrudes above the surrounding level of the ground. The ground auger can be held in place with a stick extending from one side of the hole, through the bracket, and onto the ground on the opposite side of the hole.

STEP 7: Pour concrete into hole around ground auger. Carefully fill hole to keep from moving ground auger. Continue filling until the concrete is level with the surrounding ground. Allow concrete to cure completely before proceeding to the next step.

STEP 8: Connect wire rope to tie down hooking point on the bottom side of the base platform. (A ladder may be required to perform this step on tall stands.) Run wire rope through hook and secure with (2) wire rope clips. Adequately tighten the wire rope clips to prevent the wire rope from slipping.

STEP 9: Extend turnbuckle to its maximum length by holding the eye and clevis on each end and turning the center turnbuckle body.

STEP 10: Install the 1/2” x 3-1/2” hex bolt, 1/2” flat washers, 1/2” lock washer, and 1/2” hex nut in the ground auger bracket.

STEP 11: Attach the clevis end of the turnbuckle to the 1/2” bolt. String cable through the eye on the opposite end of the turnbuckle and pull up. Secure the wire rope with (2) wire rope clips. Adequately tighten the wire clips to prevent the wire rope from slipping.

STEP 12: Hold the eye of the turnbuckle then turn the turnbuckle so that it tightens on both hooks equally. Tighten the turnbuckle until the wire rope is tight.

WARNING! Periodic tensioning of the turnbuckle and wire rope maybe required as stand settles. Check tension each time before entering stand. Failure to follow these instructions may result in serious injury or death.

**Deer Stand**

**Part Summary**

*Box #1 Contents*

- **“AD”** Ladder Stabilizer (2)
- **“A”** Base Platform (1)
- **“G”** Ladder Section (2)
- **“H”** Leg Foot (4)
- **“I”** Ladder Splice (2)
- **“J”** Ladder Foot (2)
- **“K”** Ladder Connector (2)
- **“L”** Ladder Hand Rail (1)
- **“M”** Porch Hand Rail (2)
- **Hardware Kit (1)**

*Box #2 Contents*

- **“B”** Upper Leg (4) (11 Holes)
- **“C”** Lower Leg (4) (8 Holes)

*Box #3 Contents*

- **“D”** Middle Perimeter Angle (4)
- **“E”** Lower Perimeter Angle (4)
- **“F”** Cross Brace (8)

READ THESE INSTRUCTIONS IN ENTIRETY PRIOR TO ASSEMBLING THIS PRODUCT
The footprint on the 10’ stand is 7 feet 8.5 inches by 7 feet 8.5 inches square (7’ 8.5” X 7’ 8.5”). This measurement is from the center of the rebar stake hole in the Leg Foot.
Rope & Carabiner

Your Redneck Deluxe Powder Coated Tower Stand comes with a Rope & Carabiner to assist you in hoisting your gear into the Redneck Blind. Tie one end of the rope to the Platform Handrail, as illustrated in the diagram below, and use the carabiner to connect to your gear.
