## Easy Kit Assembly Instructions

---

### STEP 1 - Assemble The ClearView Container

With your hand, take the clear flat container with the oval label facing you and squeeze the sides (near the middle, vertically) until the bottom of the box solidly locks into place. Gently squeeze all sides to ensure the box corners are squared up.

### STEP 2 - Prepare The Food Stand

Take the paper stand and lay upside down (print facing down) on a clean flat surface or paper towel. Using a bone folder, pen, or even a finger nail, firmly crease the short score mark allowing the long flap to fold flat over the back side of the stand. Next, use less pressure to gently bend the two side flaps along the score marks so that the flaps slightly bend upward. Do not use pressure to crease the score mark.

### STEP 3 - Remove The Lids

Lay out a paper towel or napkin on a flat surface. Take one cup and slowly and gently remove the lid leaving the caterpillars in the cup on the food. There will be silk that the caterpillars form on the underside of the lid that could trap or pull the caterpillars out of the cup. It is helpful to use a small paint brush or Q-tip to gently brush the caterpillars off the lid and back onto the food.

### STEP 4 - Insert The Stand

Take the paper stand and place the cup with the food and caterpillars into the round hole. Be sure to push the cup as far into the hole as it will go so that the rim of the cup is sitting on the edge of the opening. Slide the stand into the container ensuring that it is snugly in place with the bottom of the stand on the floor of the container and the back of the stand flush with the back side of the container. Close the top flaps and place in a location away from direct sunlight.
