

PILLOW CARE INSTRUCTIONS

PRIOR TO USE

New memory foam may initially have a slight harmless odor, but will disappear over a short time with regular use.

To expedite odor control, remove the cover and place your memory foam pillow in a dry, well-ventilated area. Recommended air out time is 24-72 hours.

Memory foam reacts easily to temperature. Colder temperatures cause your pillow to become firmer, but body heat will help soften foam.

CLEANING & CARE

Wash cover before first use.

Wash cover in warm water using the gentle cycle and a non-chlorine bleach detergent. Use cold water for rinse.

The pillow can only be spot cleaned by hand with mild detergent. **Do not soak or machine-wash your memory foam pillow!** Rinse with warm water.

DETERGENT

Use non-alkaline/mild detergent only.
Do not add bleach or whiteners.

BLEACHING

Do not use bleach as it will weaken fibers and cause material to turn yellow early.

If white material needs bleaching, use oxygen-based bleach.

DRYING

Tumble dry cover on lowest heat setting. Do not use any heat setting above tumble-dry as this will weaken the cover's fibers, causing shrinkage and shortening the life of your pillow cover.

Dry your spot cleaned pillow at room temperature away from heat or light. Do not machine wash or dry. We recommend a non-toxic enzyme cleaner because it gently removes stains and odors completely.

Pillow needs to be completely dry before putting your pillow cover back on.
