KONG COOLER ICE RETENTION DATA

Tested at 70°F constant temp, full of Ice. Opening 2 full min/day, no pre-chill.

HOW TO MAXIMIZE YOUR ICE

PRE-CHILL/FREEZE EVERYTHING INCLUDING THE COOLER.

To pre-chill your KONG, put a bag of ice in the night before, drain in the morning, and then top it off with ice.

USE LOTS OF ICE IN THE COOLER.

Don't drain the water later. It will help to keep things cold once the cooler has a stabilized temperature.

KEEP THE COOLER LID CLOSED AS MUCH AS YOU CAN.
