

CLEANING YOUR GATORSTEP™ PRODUCT

GatorStep™ is made from a closed cell EVA foam and is therefore completely waterproof.

GatorStep™ floors are resistant to most stains and oil and require very little maintenance other than sweeping up debris, wiping up spills, and cleaning with mild soap and water from time to time.

For your soap solution, tests determine that approx. 1 Tbsp. of Dawn dishsoap to every gallon of water used is adequate to provide a sufficient cleaning mixture. Be sure to rinse well after cleaning to remove any excess soap from the surface.

For really stubborn stains, it is determined that degreaser based products work safely to clean and remove. The product proven the most effective in our testing is the concentrated CitraSolv cleaner & degreaser. It is only recommended to use harsher degreaser products if diluted and as a last resort.

Keep in mind that the longer dirt and grime sit on a surface, the more difficult the surface can be to clean.

We recommend cleaning soon after any heavy use and further as needed.

SURFACE PREPARATION

The surface area where GatorStep will adhere should be thoroughly prepared using an ammonia based cleaner. Prior to applying your GatorStep adhesive you will want to ensure the surface has been cleared of any loose debris, wiped clean and is completely dry.

INSTALLATION

For a quick, straightforward, peel and stick process follow our visual guide below to install your GatorStep cooler lid. The initial repositionable ability will provide for simple and easy adhesion.

- Confirm that any existing grease, adhesives, wax or similar coatings are cleared before installing.
- Be sure that the temperature of the air is above 60° fahrenheit when applying the exposed adhesive.
- *DO NOT ATTEMPT TO OVER STRETCH THE PAD(S)

STEP 1

Lay the pad into place with the backing intact to verify your placement and fit.

STEP 2

Lift the edge and pull the backing paper away from the GatorStep.

STEP 3

Fold the backing paper and tuck slightly under lifted area and make a crease on the fold.

STEP 4

Use your hand in an open flat position to smooth out GatorStep, guiding out any air bubbles while laying your piece into position.

STEP 5

Lift the other side of the GatorStep, completely remove backing paper then lay in place, repeating step 4.
